Node.js Dependency Removed

Qualify no longer has a dependency on **Node.js**. The only engine version that required Node.js was **2024.11.1.1**. All later engine versions ship without this requirement.

Removing the Dependency

To remove the Node.js dependency from your environment, simply **upgrade to any engine version later than 2024.11.1.1**. Once upgraded, Node.js is no longer required and **can be uninstalled from the host machine at any time**.

Steps

1. Upgrade the Qualify engine to a version later than **2024.11.1.1**.
2. Verify the upgraded engine is functioning correctly.
3. Uninstall Node.js from the host machine.

> **Note:** No action is required if you are already running an engine version later than 2024.11.1.1. Node.js is not present in your deployment and can be disregarded.
