

Tektronix Video System Integration CAD file library

The Tektronix Video System Integration CAD File Library contains AutoCAD® drawings of various Tektronix video products. The drawing views are saved as blocks to make it easy for system integrators to cut and paste the blocks into their system drawings.

Each drawing contains a front and rear view of the product and includes pin-out information for the multi-pin connectors. In drawings of products that are module based (TG8000 and TG700), there is a rear view for each available module plus a front and rear view of the product mainframe. This allows you to build a drawing that matches the system that was ordered.

NOTE. *The drawings were saved using AutoCAD® version 2004/LT2004.*

Some versions of Microsoft Visio allow you import AutoCAD® drawings.

Access the drawings

The drawing files are attached to this PDF and are named by the product model they support. To use the drawings, copy the desired files to your hard drive and then open them with AutoCAD®.

Covered products

Drawings of the following Tektronix video products are included:

Waveform monitors. WFM4000, WFM5000, WFM5200, WFM5250, WFM6120, WFM7200, WFM8200, and WFM8300.

Waveform rasterizers. WVR4000, WVR5000, WVR5200, WVR5250, WVR7200, WVR8200, and WVR8300.

Test signal generators. SPG300, SPG600, SPG700, SPG8000, SPG8000A, TG700, and TG8000.

Changeover units. ECO422D, ECO8000, and ECO8020.
