# Getting Started With Episode Engine
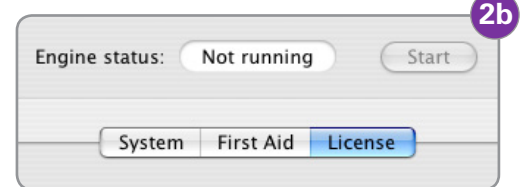

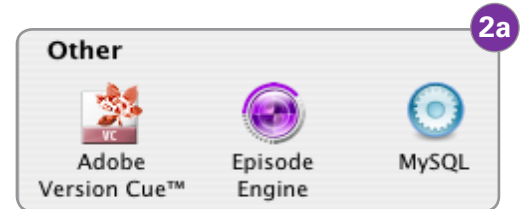

1 Install

a. Install Episode® Engine by double-clicking "Episode Engine.pkg" in the disc image.

b. Read the Installation information and the License Agreement and click continue.

c. Choose a destination where you wish to install Episode Engine or keep the default destination.

d. Name the Engine user and group (you need to create a separate user for the Engine to protect your other user accounts). We recommend you use the default settings.

e. Select the stand-alone option and finish your basic installation.

f. Drag the Engine Admin application to your Applications folder.
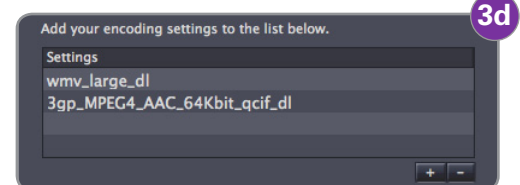

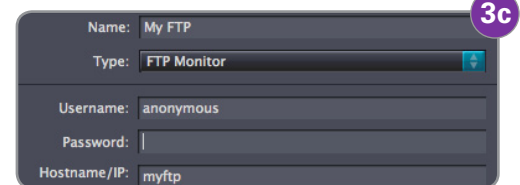

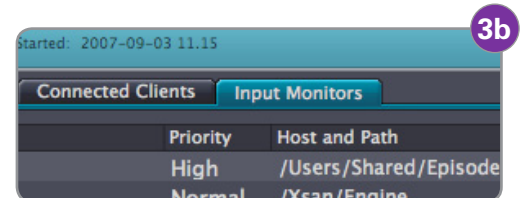

2 Start Episode Engine

a. In System Preferences, choose Episode Engine.

b. Select the license tab and drag the Episode Engine license file, license.xml into the license area.

c. Select Admin under the System tab and set the Engine Admin password.

d. Start Episode Engine by clicking the Start button at the top.

3 Create an input monitor

a. Open Episode/Episode Pro, select a setting, click the Upload Setting button and browse to the desired folder.

b. To create an Input Monitor, open Engine Admin, select the Input Monitors tab and click the New button.

c. Name your monitor, select input type and fill in the information required.

d. Add your encoding setting(s) to the settings list by clicking the Plus button.

e. Adjust the priority level if necessary and click the OK button to activate the Input Monitor. Make sure the Activate Monitor Now checkbox is selected!

4 Encode a file

a. To encode a file, drop it into your monitored folder. If you wish to monitor the encoding, open the Engine Admin application.
