Wirecast 4.2 Now Available

Telestream is pleased to announce the release of Wirecast 4.2 software. This free update extends Wirecast's powerful live streaming production capabilities to more users.

Highlights include:

- **New! Virtual Camera and Microphone output** for Mac and Windows allows Wirecast video and audio output to be picked up as a source in other devices or software including Skype, Google Hangouts and GoToMeeting (Windows only)

- **New! [XOS Digital® ThunderCloud LiveScore™ Service support](#)** – Now get fully customizable scoreboards and automatic, real-time updates in Wirecast Pro for Windows!

- **New! [Matrox® VS4™ multi-channel video capture card support](#)** provides four independent HD-SDI inputs, making it ideal for multi-camera live video production and broadcasting (Windows only)

- **New! Blackmagic capture support**, includes Blackmagic Intensity Extreme (Thunderbolt) and Blackmagic UltraStudio 3D (Thunderbolt)

- **New! AJA capture support** including AJA IO XT and AJA Kona LHi (Mac OS X)

- **New! Custom canvas sizes** extends Wirecast reach to video gamers by enabling capture of specific screen resolutions, including 1920x1080

- **New! Support for the AVerMedia Game Broadcaster HD card** designed for console and PC games, allows gamers to capture up to 1080p

- **New! OS X Mountain Lion support**

- **New! Quality and performance** improvements with updates to Flash libraries

- … and more
