Switch
Manual Activation Guide

Introduction

Follow these instructions to manually activate your serial number if you are not connected to the internet, or if you are being blocked by a firewall.
**Activating Switch**

1. For Switch on Mac, open the application and select Preferences

   ![Preferences Window]

2. Once inside the Preferences window, click the License icon to display the Licenses panel. Click the Activate button to display the Activate Serial Number dialog box.

   ![Activate Serial Number Dialog]

3. Enter the serial number. Be sure to enter only zeroes (no capital letter O’s), capitalize all letters, and include hyphens. Click Activate.

   ![Enter Serial Number]

4. Since you are not connected to Internet, you will see the following dialog. Choose to activate using a different computer with web access. Click Next.

![Activation Options](image1)

5. You will be given an activation URL: [http://activate.esellerate.net](http://activate.esellerate.net) and an Installation ID. Copy the ID and open the URL on the computer with internet access.

![Activate another computer with web access](image2)

6. Enter the auto-generated installation ID into the eSellerate Web site. (Remember: this is not your serial number) Click Submit. It will generate you an activation key below your entry. Copy your new Activation Key.

![After-Purchase Services](image3)
7. In your activation dialogue box, click next.

8. Now you will enter your unique activation key from the eSellerate site (composed of ten groups of numbers and letters.) Paste or type your key and click Activate.

9. You will get a message that your activation has been successful. Click Done. Click OK.

The activation key is validated and the application you purchased is activated. Now, you can utilize the features of the upgrade you purchased without trial/demo limits. You can now close your Preferences.
