# How to export from Final Cut Pro X with Flip4Mac.

Flip4Mac® components allow you to play, import, convert and export Windows Media video and audio files on your Mac. Developed by Telestream and distributed by Microsoft, Flip4Mac components are the most trusted solution with professional support, stability, and official support from Microsoft.
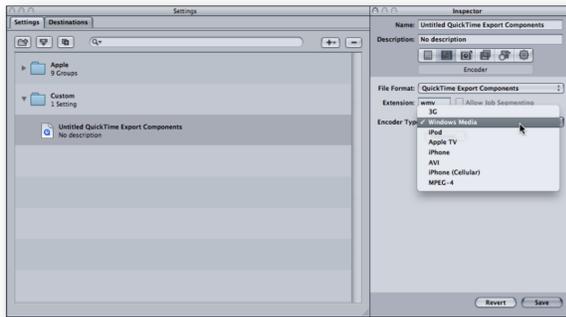

Final Cut Pro X introduced a new **Share** menu for vide file exports. Classic QuickTime export options are not available anymore. Customers require the additional Compressor 4 transcoding application to get more export options available in the Share menu.

Compressor 4 supports all Flip4Mac upgrade levels. Customers need to create WMV export presets in Compressor with Flip4Mac.

1. Click on the ✦ button on the upper right in Compressor's **Settings** window to add new export settings to Compressor.

2. In the drop-down menu select **QuickTime Export Components**.

telestream

3. You can modify your preset in the *Inspector window*. Make sure that **File Format** is set to *QuickTime Export Components*. In the **Encoder Type** drop-down menu select *Windows Media*.

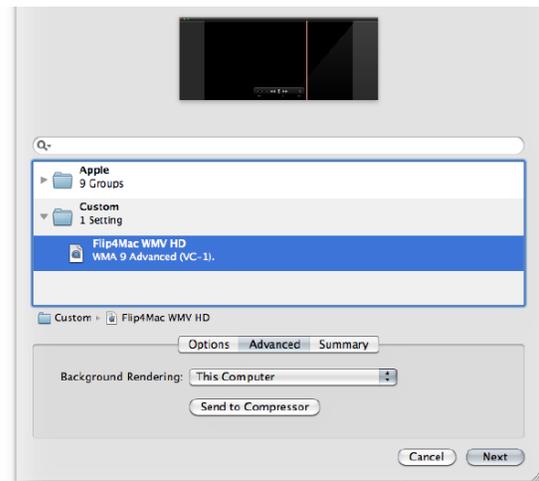

4. The **Options** button will open the *Flip4Mac WMV Export Settings* window that allows you to modify your WMV and WMA settings. This is the same window used when exporting from QuickTime 7 player and other applications.

5. Add a fitting **Name** and **Description** for your preset.

Please create a separate preset in Compressor for each WMV setting that you want to access from Final Cut Pro X.

You can export Final Cut Pro X events via the **Share** menu.

1. To access your WMV export preset, select *Export Using Compressor Settings...*in the **Share** menu.

2. Select your WMV export preset from the *Custom* folder.

3. Check the **Advanced** tab for *Background Rendering* settings.

4. When you are done click the **Next** button to start the WMV export.
