Warranty

Telestream on behalf of itself and its Affiliates ("Telestream") warrants that this product will be free from defects in materials and workmanship for a period of one (1) year from the date of shipment. If any such product proves defective during this warranty period, Telestream, at its option, either will repair the defective product without charge for parts and labor, or will provide a replacement in exchange for the defective product. Parts, modules and replacement products used by Telestream for warranty work may be new or reconditioned to like new performance. All replaced parts, modules and products become the property of Telestream.

In order to obtain service under this warranty, Customer must notify Telestream of the defect before the expiration of the warranty period and make suitable arrangements for the performance of service. Customer shall be responsible for packaging and shipping the defective product to the service center designated by Telestream, with shipping charges prepaid. Telestream shall pay for the return of the product to Customer if the shipment is to a location within the country in which the Telestream service center is located. Customer shall be responsible for paying all shipping charges, duties, taxes, and any other charges for products returned to any other locations.

This warranty shall not apply to any defect, failure or damage caused by improper use or improper or inadequate maintenance and care. Telestream shall not be obligated to furnish service under this warranty a) to repair damage resulting from attempts by personnel other than Telestream representatives to install, repair or service the product; b) to repair damage resulting from improper use or connection to incompatible equipment; c) to repair any damage or malfunction caused by the use of non-Telestream supplies; or d) to service a product that has been modified or integrated with other products when the effect of such modification or integration increases the time or difficulty of servicing the product.

THIS WARRANTY IS GIVEN BY TELESTREAM WITH RESPECT TO THE PRODUCT IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED. TELESTREAM AND ITS VENDORS DISCLAIM ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TELESTREAM’S RESPONSIBILITY TO REPAIR OR REPLACE DEFECTIVE PRODUCTS IS THE SOLE AND EXCLUSIVE REMEDY PROVIDED TO THE CUSTOMER FOR BREACH OF THIS WARRANTY. TELESTREAM AND ITS VENDORS WILL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES IRRESPECTIVE OF WHETHER TELESTREAM OR THE VENDOR HAS ADVANCE NOTICE OF THE POSSIBILITY OF SUCH DAMAGES.

Important compliance and safety information

United States of America Compliance Notices

**Class A Interference Statement**

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15, Subpart B of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a commercial installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**FCC Caution**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

**Safety**

**Environmental**

Perchlorate Materials: this product contains one or more type CR lithium batteries. According to the state of California, CR lithium batteries are classified as perchlorate materials and require special handling.

See [www.dtsc.ca.gov/hazardouswaste/perchlorate](http://www.dtsc.ca.gov/hazardouswaste/perchlorate) for additional information.

Canada Compliance Notices

**Department of Communications Radio Interference Regulations**

This digital apparatus does not exceed the Class A limits for radio-noise emissions from a digital apparatus as set out in the Radio Interference Regulations of the Canadian Department of Communications. This Class A digital apparatus complies with Canadian ICES-003.

**Reglement sur le brouillage radioelectrique du Quadstere des Communications**

Cet appareil numerique respecte les limites de bruits radioelectriques visant les appareils numeriques de classe A prescrites dans le Reglement sur le brouillage radioelectrique du Quadstere des Communications du Canada. Cet appareil numerique de la Classe A est conforme a la norme NMB-003 du Canada.
Safety

Sécurité

CAN / CSA-22.2 NO. 61010-1-12 + G1 + G12 :: Exigences de sécurité pour l'électricité Matériel de mesure, de contrôle et d'utilisation en laboratoire - Partie 1: Généralités Exigences.

European Union and European Free Trade Association (EFTA) Compliance Notices

This equipment may be operated in the countries that comprise the member countries of the European Union and the European Free Trade Association. These countries, listed in the following paragraph, are referred to as The European Community throughout this document:

AUSTRIA, BELGIUM, BULGARIA, CYPRUS, CZECH REPUBLIC, DENMARK, ESTONIA, FINLAND, FRANCE, GERMANY, GREECE, HUNGARY, IRELAND, ITALY, LATVIA, LITHUANIA, LUXEMBOURG, MALTA, NETHERLANDS, POLAND, PORTUGAL, ROMANIA, SLOVAKIA, SLOVENIA, SPAIN, SWEDEN, UNITED KINGDOM, ICELAND, LICHTENSTEIN, NORWAY, SWITZERLAND

Declaration of Conformity

Marking by the “CE” symbol indicates compliance with the Essential Requirements of the EMC Directive of the European Union 2014/30/EU

This equipment meets the following conformance standards:

Safety

EN 61010-1: Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements
Low Voltage Directive 2014/35/EU

Emissions

Immunity

EN 55103-2: 2009, EN 61000-4-2: 2009,
EN 61000-4-5: 2006, EN 61000-4-6: 2009, EN 61000-4-11: 2004
Environments: E2

Warnings

⚠️ Warning! This is a Class A product. In a domestic environment, this product may cause radio interference, in which case, the user may be required to take appropriate measures.
Achtung! Dieses ist ein Gerät der Funkstorgrenzwertklasse A. In Wohnbereichen können bei Betrieb dieses Gerätes Rundfunkstörungen auftreten, in welchen Fällen der Benutzer für entsprechende Gegenmaßnahmen verantwortlich ist.

Attention! Ceci est un produit de Classe A. Dans un environnement domestique, ce produit risque de créer des interférences radioélectriques, il appartendra alors à l'utilisateur de prendre les mesures spécifiques appropriées.

Notes:
1. For Compliance with the EMC standards listed here, high quality shielded interface cables should be used.
2. Emissions which exceed the levels required by this standard may occur when this equipment is connected to a test object.

Environmental Compliance

This section provides information about the environmental impact of the product.

Product end-of-life handling

Observe the following guidelines when recycling an instrument or component:

Equipment recycling
Production of this equipment required the extraction and use of natural resources. The equipment may contain substances that could be harmful to the environment or human health if improperly handled at the product's end of life. To avoid release of such substances into the environment and to reduce the use of natural resources, we encourage you to recycle this product in an appropriate system that will ensure that most of the materials are reused or recycled appropriately.

This symbol on the product or its packaging indicates that this product complies with the applicable European Union requirements according to Directives 2012/19/EU and 2006/66/EC on waste electrical and electronic - equipment (WEEE) and batteries.

It also indicates that this product must not be disposed of with your other household waste. Instead, it is your responsibility to dispose of your waste equipment by handing it over to a designated collection point for the recycling of waste electrical and electronic equipment. The separate collection and recycling of your waste equipment at the time of disposal will help conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste for recycling, contact your local authority, or where you purchased your product.

Battery Recycling
This product may contain a rechargeable battery, which must be recycled or disposed of properly. Properly dispose of or recycle the battery according to local government regulations.

Transporting Batteries or products with Batteries in them
The capacity of the lithium ion secondary battery shipped with this product is under 100 Wh. The lithium content of the installed primary battery is under 1 g. Each battery meets the applicable requirements of UN Manual of Tests and Criteria Part III Section 38.3. Battery quantity is under the limit for shipment according to Section II of the relevant Packing Instructions from the IATA Dangerous Goods Regulations. Consult your air carrier for
applicability and determination of any special lithium battery transportation requirements.

**Restriction of Hazardous Substances**
This product is classified as an industrial monitoring and control instrument, and is not required to comply with the substance restrictions of the RoHS 3 Directives 2011/65/EU and EU 2015/863 until July 22, 2021. This product does, however, comply with the RoHS 2 Directive 2011/65/EU.

**Korea Compliance Statement**

<table>

**Taiwan Compliance Statement**

警告使用者：
這是甲類的資訊產品，在居住的環境中使用時，可能會造成射頻干擾，在這種情況下，使用者會被要求採取某些適當的對策。

This is a Class A product based on the standard of the Bureau of Standards, Metrology and Inspection (BSMI) CNS 13438, Class A. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

**Japan Compliance Statement**

この装置は、クラスA情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されることがあります。

This is a Class A product based on the standard of the VCCI Council (VCCI 32: 2016). If this equipment is used in a domestic environment, radio interference may occur, in which case, the user may be required to take corrective actions.

**Important Safety Information**

This manual contains information and warnings that must be followed by the user for safe operation and to keep the product in a safe condition.

To safely perform service on this product, see the Service safety summary that follows the General safety summary.

**General Safety Summary**

Use the product only as specified. Review the following safety precautions to avoid injury and
prevent damage to this product or any products connected to it. Carefully read all instructions. Retain these instructions for future reference.

**Comply with local and national safety codes.**
For correct and safe operation of the product, it is essential that you follow generally accepted safety procedures in addition to the safety precautions specified in this manual.

**The product is designed to be used by trained personnel only.**
Only qualified personnel who are aware of the hazards involved should remove the cover for repair, maintenance, or adjustment. Before use, always check the product with a known source to be sure it is operating correctly.

While using this product, you may need to access other parts of a larger system. Read the safety sections of the other component manuals for warnings and cautions related to operating the system.

When incorporating this equipment into a system, the safety of that system is the responsibility of the assembler of the system.

**To Avoid Fire or Personal Injury**
*Use proper power cord:* Use only the power cord specified for this product and certified for the country of use. Do not use the provided power cord for other products.

*Ground the product:* This product is grounded through the grounding conductor of the power cord. To avoid electric shock, the grounding conductor must be connected to earth ground. Before making connections to the input or output terminals of the product, ensure that the product is properly grounded. Do not disable the power cord grounding connection.

*Power disconnect:* The power cord disconnects the product from the power source. See instructions for the location. Do not position the equipment so that it is difficult to operate the power cord; it must remain accessible to the user at all times to allow for quick disconnection if needed.

*Observe all terminal ratings:* To avoid fire or shock hazard, observe all rating and markings on the product. Consult the product manual for further ratings information before making connections to the product. Do not apply a potential to any terminal, including the common terminal, that exceeds the maximum rating of that terminal.

*Do not operate without covers:* Do not operate this product with covers or panels removed, or with the case open. Hazardous voltage exposure is possible.

*Avoid exposed circuitry:* Do not touch exposed connections and components when power is present.

*Do not operate with suspected failures:* If you suspect that there is damage to this product, have it inspected by qualified service personnel.

*Disable the product if it is damaged:* Do not use the product if it is damaged or operates incorrectly. If in doubt about safety of the product, turn it off and disconnect the power cord. Clearly mark the product to prevent its further operation.

Before use, inspect voltage probes, test leads, and accessories for mechanical damage and
replace when damaged. Do not use probes or test leads if they are damaged, if there is exposed metal, or if a wear indicator shows.

Examine the exterior of the product before you use it. Look for cracks or missing pieces.

**Use only specified replacement parts.**

Do not operate in wet/damp conditions: Be aware that condensation may occur if a unit is moved from a cold to a warm environment.

Do not operate in an explosive atmosphere.

Keep product surfaces clean and dry: Remove the input signals before you clean the product.

Provide proper ventilation: Refer to the manual's installation instructions for details on installing the product so it has proper ventilation.

Slots and openings are provided for ventilation and should never be covered or otherwise obstructed. Do not push objects into any of the openings.

Provide a safe working environment: Always place the product in a location convenient for viewing the display and indicators.

Be sure your work area meets applicable ergonomic standards. Consult with an ergonomics professional to avoid stress injuries.

Use only the Telestream rackmount hardware specified for this product.

**Service Safety Summary**

The Service safety summary section contains additional information required to safely perform service on the product. Only qualified personnel should perform service procedures.

Read this Service safety summary and the General safety summary before performing any service procedures.

*To avoid electric shock:* Do not touch exposed connections.

*Do not service alone:* Do not perform internal service or adjustments of this product unless another person capable of rendering first aid and resuscitation is present.

*Disconnect power:* To avoid electric shock, switch off the product power and disconnect the power cord from the mains power before removing any covers or panels, or opening the case for servicing.

*Use care when servicing with power on:* Dangerous voltages or currents may exist in this product. Disconnect power, remove battery (if applicable), and disconnect test leads before removing protective panels, soldering, or replacing components.

*Verify safety after repair:* Always recheck ground continuity and mains dielectric strength after performing a repair.

**Terms in the Manual**

*These terms may appear in this manual:*
**WARNING.** Warning statements identify conditions or practices that could result in injury or loss of life.

**CAUTION.** Caution statements identify conditions or practices that could result in damage to this product or other property.

**Terms on the Product**

*These terms may appear on the product:*

- **DANGER** indicates an injury hazard immediately accessible as you read the marking.
- **WARNING** indicates an injury hazard not immediately accessible as you read the marking.
- **CAUTION** indicates a hazard to property including the product.

**Symbols on the Product**

When this symbol is marked on the product, be sure to consult the manual to find out the nature of the potential hazards and any actions which have to be taken to avoid them. (This symbol may also be used to refer the user to ratings in the manual.)

*The following symbol(s) may appear on the product:*

![Symbol Images]

**General Safety Product Specific Statements**

Use the product only as specified. Review the following safety precautions to avoid injury and prevent damage to this product or any products connected to it. Carefully read all instructions. Retain these instructions for future reference.

Comply with local and national safety codes.

For correct and safe operation of the product, it is essential that you follow generally accepted safety procedures in addition to the safety precautions specified in this manual. The product is designed to be used by trained personnel only.

Only qualified personnel who are aware of the hazards involved should remove the cover for repair, maintenance, or adjustment.

Before use, always check the product with a known source to be sure it is operating correctly.

This product is not intended for detection of hazardous voltages.

Use personal protective equipment to prevent shock and arc blast injury where hazardous live conductors are exposed.
When incorporating this equipment into a system, the safety of that system is the responsibility of the assembler of the system.

Damage to the instrument can occur if this instrument is powered on at temperatures outside the specified temperature range.

The instrument does not have a power switch. When you connect the power plug to one of the AC line connectors, and the Power Supply module for that slot is installed, the instrument powers on. If you have only one power supply installed, be sure to connect the power plug to the correct rear-panel power connector.

Personal injury or damage to the instrument can occur if the instrument is not properly secured in the equipment rack.

To reduce the risk of fire and shock, ensure that the mains supply voltage fluctuations do not exceed 10% of the operating voltage range.

---

**CAUTION.** Damage to the instrument can occur if this instrument is powered on at temperatures outside the specified temperature range.

**WARNING.** Personal injury or damage to the instrument can occur if the instrument is not properly secured in the equipment rack.

**WARNING.** To prevent injury during product installation, use care not to pinch hands or fingers in the rails and slides.

**CAUTION.** To prevent damage to the instrument and rackmount, do not force the instrument into the rack if it does not slide smoothly. The rails assembly may need to be adjusted to resolve the problem.

**WARNING.** To prevent injury when removing the product from the rack, do not forcefully and abruptly pull the product from the rack. Pull with the minimum force required to move the instrument with a consistent, even motion.

**CAUTION.** The instrument does not have a power switch. When you connect the power plug to one of the AC line connectors, and the Power Supply module for that slot is installed, the instrument powers on. If you have only one power supply installed, be sure to connect the power plug to the correct rear-panel power connector.
Preface

This manual provides safety and installation information for the ECO8000 Series Automatic Changeover Unit. Also included is information about basic instrument operation.

Product description

The ECO8000 Series Automatic Changeover Unit is a highly versatile automatic sync and signal changeover unit with configurations and capabilities required to address modern master sync application and other advanced sync timing application. The ECO8000 Series offers exceptional reliability, stability, and is designed with optional high-bandwidth input changeover capabilities for HD/SD and/or 3G-SDI signal environments.

Each ECO8000 unit can be used with the following signal generators to form the complete sync generator system, which offers extra redundancy for the critical timing and synchronization system in the facilities.

- A pair of Telestream Tektronix Video Master Sync / Master Clock Reference Generators (SPG8000A, SPG8000 or SPG700) for most broadcast facility timing applications.
- A pair of Telestream Tektronix Video Test Signal Generators (TG8000) for more advanced post production facility timing applications.

ECO8000 Series models

The ECO8000 Series consist of the following models:

- **ECO8000**: This model provides up to nine user-configurable BNC channels and four LTC channels. The base configuration has three 50 MHz Electronic Fast Switch (REF/ELSW) channels with options for six more 50 MHz Electronic Fast Switch or 3 GHz Relay Switch (HREF/Relay) channels in groups of three channels each, plus four optional LTC channels. Each channel consisting of primary and backup inputs, and an output.

- **ECO8020**: This model provides up to 20 user-configurable high-density BNC channels and four LTC channels. The base configuration has five 50 MHz Electronic Fast Switch (REF/ELSW) channels with options for 15 more 50 MHz Electronic Fast Switch or 3 GHz Relay Switch (HREF/Relay) channels in groups of five channels each, plus four optional LTC channels. Each channel consisting of primary and backup inputs, and an output.
Key features and benefits

- Innovative architecture provides highly reliable basic ECO function and advanced monitoring capability
- Switches analog black burst, HD tri-level sync, AES/DARS, word clock, LTC, as well as 3G-SDI, HD-SDI, and SD-SDI signals – all the timing and synchronization signals required in modern broadcast, production, and post production facilities
- Scalable product architecture to fit various application needs
- Electronic Fast Switch function for near glitch-less sync source switching, minimizing disruption in operations if a switch is necessary to service the primary sync source
- Relay backups provide continued signal connection in the event that the ECO loses power
- Automatic and Manual changeover modes with indicator
- Front panel LED indicators for the status of each Primary and Backup channel
- Front panel LED indicators for the AC and DC status of each installed power supply
- Dual hot-swappable power supplies ensure continuous availability of reference signals

Web Interface. An easy to navigate Web-based interface allows quick access to most of the instrument settings and views. (See How to use the Web Interface.) In most cases, it is easier to access and configure the instrument using the Web Interface. Examples of where this is especially true are:

- Viewing instrument status
- Viewing the Event Log
- Viewing diagnostic results
- Configuring event reporting
- Configuring e-mail reporting
- Configuring channel settings such as threshold levels, labels, etc.

Getting Started

Initial product inspection

Perform the following product inspection procedure when you receive your instrument:

1. Inspect the shipping carton for external damage, which may indicate damage to the instrument.

2. Remove the instrument from the shipping carton, and then check that the instrument has not been damaged in transit. Prior to shipment the instrument is thoroughly inspected for mechanical defects. The exterior should not have any scratches or impact marks.

**NOTE.** Save the shipping carton and packaging materials for instrument repackaging in case shipment becomes necessary.

3. Verify that the shipping carton contains the basic instrument, all modules you ordered, the standard accessories and any optional accessories that you ordered listed in the table. *(See Table 1.)*

4. Contact support if there is a problem with your instrument or if your shipment is incomplete: [www.telestream.net/telestream-support/video/support.htm](http://www.telestream.net/telestream-support/video/support.htm).
The following table lists the standard and optional accessories provided with the ECO8000 Series product.

### Table 1: Standard and optional accessories

1 To reorder the rack mounting kit, order ECO800UP or ECO802UP Option RACK.
2 To reorder the XLR adapter cable, order ECO800UP or ECO802UP Option XLR.
3 To reorder the set of BNC adapter cables, order ECO802UP Option CBL.

### International power cord options

All of the available power cord options listed include a lock mechanism except as otherwise noted.

- Opt. A10 – China power
Check that the location of your installation has the proper operating environment as listed in the following table. *(See Table 2.)*

**CAUTION.** Damage to the instrument can occur if this instrument is powered on at temperatures outside the specified temperature range.

</table>

Leave space for cooling by ensuring standard side clearance for rack mounting or 2 inches (5.1 cm) of side clearance for benchtop use. Also, ensure sufficient rear clearance (approximately 2 inches) so that cables are not damaged by sharp bends. For complete specifications for the instrument, refer to the *ECO8000 Series Specifications and Performance Verification Technical Reference*. You can locate this document on the website: [www.telestream.net/video/resources.htm#Literature](http://www.telestream.net/video/resources.htm#Literature).
Rackmount installation  
(Option RACK only)

This instrument is configured at shipment for use in an equipment rack only if Option RACK was ordered. Refer to the Rackmount Slides and Rails Kit Instructions that was supplied with the instrument for instructions on how to install the rackmounting hardware.

**WARNING.** Personal injury or damage to the instrument can occur if the instrument is not properly secured in the equipment rack.

To install the instrument into an equipment rack. After you have installed the rackmounting hardware, perform the following steps to install the instrument into an equipment rack:

**WARNING.** To prevent injury during product installation, use care not to pinch hands or fingers in the rails and slides.

1. Insert the instrument left and right slides into the ends of the rack rails while tilting the long handle part of each lever upward. *(See Figure 1.)*

**NOTE.** Make sure to insert the instrument slides inside the inner rack rails. You may also need to tilt the rear of the instrument up or down at a slight angle to fit the slides into the rails.

2. Push the instrument into the rack until it stops.

**CAUTION.** To prevent damage to the instrument and rackmount, do not force the instrument into the rack if it does not slide smoothly. The rails assembly may need to be adjusted to resolve the problem.

3. Retighten any loose screws and push the instrument all the way into the rack. If the tracks do not slide smoothly, readjust the rail assemblies.

4. When adjusting is completed, tighten all rail assembly 10-32 screws using 28 inch-lbs of torque.

5. If the instrument has knob screws on the front corners, tighten them so that they are secured in the rack.

6. To remove the instrument from the rack, loosen the knob screws.
To remove the instrument from an equipment rack. Perform the following steps to remove an instrument that is installed in an equipment rack:

1. Loosen the knob screws, if present, that attach the front of the instrument to the rack.
2. Gently pull the instrument toward you until you can reach the levers at the rear of the instrument.
3. Tilt both lever handles upward simultaneously to allow them to clear the stops. (See Figure 1.)
4. Pull the instrument past the stops and out of the rack.

WARNING. To prevent injury when removing the product from the rack, do not forcefully and abruptly pull the product from the rack. Pull with the minimum force required to move the instrument with a consistent, even motion.
Power connection

This instrument operates from a single-phase power source with the neutral conductor at or near earth ground. The line conductor is fused for over-current protection. A protective ground connection through the grounding conductor in the locking power cord is essential for safe operation.

**CAUTION.** The instrument does not have a power switch. When you connect the power plug to one of the AC line connectors, and the Power Supply module for that slot is installed, the instrument powers on. If you have only one power supply installed, be sure to connect the power plug to the correct rear-panel power connector.

**AC power requirements.** Check that your location provides the proper electrical power requirements as listed in the following table. (See Table 3.)

<table>
<thead>
<tr>
<th>Table 3: AC line power requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Parameter</strong></td>
</tr>
<tr>
<td>Line Voltage Range</td>
</tr>
<tr>
<td>Line frequency</td>
</tr>
<tr>
<td>Maximum power</td>
</tr>
</tbody>
</table>

**WARNING.** To reduce the risk of fire and shock, ensure that the mains supply voltage fluctuations do not exceed 10% of the operating voltage range.
Connect the power cable(s). Standard instruments are shipped with one Power Supply module installed in slot 1. If you ordered Option DPW, your instrument was shipped with two Power Supply modules installed.

Connect the power cable(s) to the instrument first, and then connect it to the AC power source. Connecting the power cable causes the instrument to power on.

After connecting the power, make sure that the fan in the instrument is working. If the fan is not working, turn off the power by disconnecting the power cable from the AC power source, and then contact Telestream Tektronix Video support.

A power-on self test is run when the instrument first boots up. (See Power-on self test.)

Figure 2: Location of rear panel power connectors (ECO8000 shown)

Configure the preferred supply (Option DPW only). If your instrument has two Power Supply modules installed, configure one of the supplies to be the preferred (active) supply. (See Configuring the preferred (active) supply (Option DPW only).)

Network installation

The ECO8000 Series has a 10/100 BASE-T Ethernet port on the rear panel that allows you to use a PC to remotely control the instrument.

This section provides instructions for connecting the ECO8000 Series to a single PC or to a network and for setting the network parameters on the Ethernet port.
You can use one of the following two methods to connect the instrument to your PC(s):

- If you are connecting the instrument directly to a single PC, use an Ethernet cable to connect between the Ethernet port on the instrument and the Ethernet port on the PC.

- If you are connecting the instrument to your local Ethernet network, use an Ethernet cable to connect between the Ethernet port on the instrument and the Ethernet hub port of your local network. By connecting to an Ethernet network, you can access the instrument using any PC on the network.

These two procedures describe how to configure the ECO8000 Series network parameters. Use the first procedure if your network supports DHCP; use the second procedure if your network does not support DHCP.

To configure parameters for a network with a DHCP server. If your network has a DHCP server, perform these steps to configure the instrument to function as a DHCP client. When the instrument is connected to the network and DHCP service is enabled, the instrument obtains the necessary network addresses automatically from the DHCP server.

**NOTE.** Under some network environments, the instrument may not be able to get the IP address automatically from a DHCP server. In this case, you need to manually enter the appropriate network parameter values.

Refer to your network administrator or to the user documentation supplied with your network server operating system (OS) for detailed information about DHCP server functions.

1. Press the front-panel **BACK** button as necessary to access the top-level Main menu.

2. Press the up (▲) or down (▼) arrow button to select **SYSTEM CONFIG**, and then press the **ENTER** button to access the SYSTEM CONFIG menu.

3. Press the up (▲) or down (▼) arrow button to select **NETWORK CONFIG**, and then press the **ENTER** button to access the NETWORK CONFIG submenu. The display shows whether DHCP is enabled or not.

4. If necessary, press the left (◄) or right (►) arrow button to select **Enable**, and then press the **ENTER** button to implement the selection.

5. Press the down (▼) arrow button to select **IP ADDRESS**.
6. The second line of the display will show an IP address after the instrument receives an address from the DHCP server. The message “Waiting for DHCP” will appear until the instrument receives the address.

7. After the display shows an IP address, press the **BACK** button to exit the NETWORK CONFIG submenu.

**To configure parameters for a network without a DHCP server.** If your network does not have a DHCP server, perform the following procedure to set the network parameters:

1. Press the front-panel **BACK** button as necessary to access the top-level Main menu.

2. Press the up (▲) or down (▼) arrow button to select **SYSTEM CONFIG**, and then press the **ENTER** button to access the SYSTEM CONFIG menu.

3. Press the up (▲) or down (▼) arrow button to select **NETWORK CONFIG**, and then press the **ENTER** button to access the NETWORK CONFIG submenu. The display shows whether DHCP is enabled or not.

4. If necessary, press the left (◄) or right (►) arrow button to select **Disable**, and then press the **ENTER** button to implement the selection.

5. If you connected the instrument directly to a single PC:
   a. Press the up (▲) or down (▼) arrow button to select **IP ADDRESS**, and then press the **ENTER** button to enter the edit mode.
   b. Use the arrow buttons to set the IP address to be the same IP address as the PC's address except for the last number, and then press the **ENTER** button. The last number in the address must be different than the last number in the PC’s IP address.
   c. Press the up (▲) or down (▼) arrow button to select **SUBNET MASK**, and then press the **ENTER** button to enter the edit mode.
   d. Use the arrow buttons to set the subnet mask to be the same net mask (subnet mask) used by the PC, and then press the **ENTER** button. Do not enter a number if the PC does not have a net mask.
   e. You do not need to enter a **GATEWAY** address if you are directly connected to a single PC.
   f. Press the **BACK** button to exit the NETWORK CONFIG submenu.
6. If you connected the instrument to your local Ethernet network:

**CAUTION.** To prevent communication conflicts on your Ethernet network, ask your local network administrator for the correct numbers to enter in the NETWORK CONFIG submenu if you connect the instrument to your local Ethernet network.

   a. Press the up (▲) or down (▼) arrow button to select **IP ADDRESS**, and then press the ENTER button to enter the edit mode.

   b. Use the arrow buttons to set the IP address to the address supplied by your network administrator, and then press the ENTER button.

   c. Press the up (▲) or down (▼) arrow button to select **SUBNET MASK**, and then press the ENTER button to enter the edit mode.

   d. Use the arrow buttons to set the subnet mask to the address supplied by your network administrator, and then press the ENTER button.

   e. Press the up (▲) or down (▼) arrow button to select **GATEWAY ADDRESS**, and then press the ENTER button to enter the edit mode.

   f. Use the arrow buttons to set the gateway address to the address supplied by your network administrator, and then press the ENTER button.

   g. Press the BACK button to exit the NETWORK CONFIG submenu.

7. Verify the Ethernet connection by using a ping command from the PC.
System considerations

Using identical sync sources

It is recommended that the primary and backup sync sources be identically configured. If the two sync source generators have significantly different configurations, it may cause a source switch when both of the sync sources lose power.

To understand this, consider the following scenario. If power is cut to both of the sync sources, the sync signals will fail as the power supplies on the generators turn off. If the signal output from one of the sync generators is maintained longer, then the ECO8000 Series may detect one input as good and the other as bad and switch to the “good” sync source.

This might happen if the backup sync generator has only a few black outputs, but the primary sync generator has many blacks, audio and SDI signal outputs. The difference in the number of outputs loading the power supplies will make the primary sync generator turn off faster. This causes the ECO8000 Series to detect the primary source as failed while the backup is still working, resulting in a source switch.

The ECO8000 Series detects the loss of AC power and inhibits source switching to mitigate this issue. However, it can still occur in extreme cases. If it is necessary to have differently configured sync generators on the primary and backup inputs, it is recommended that you thoroughly test the loss of power condition during the system qualification testing.

Using the Expansion port to gang two ECOs

The ECO8000 Series has the ability to connect two instruments so that they function as a single larger switch. This function is useful in situations where more channels are needed than can be supported using only one instrument. One instrument operates as a master unit and the other as a slave unit.

A slave unit may change state if the master unit is changed from master to disabled or if the interconnection cable is removed. It is recommended that you configure the master and slave units during system setup and that you not change the configuration while the instrument is in operation. To help enforce this recommendation, the ECO8000 Series must be in Manual mode before you can change the state of the expansion port. (See Configure the Expansion port.)

Testing the backup source

Telestream recommends that you test the backup sync source every 6 months. The ECO8000 Series keeps track of the last time the source was changed from primary to backup and visa-versa. If it has been more than 6 months since a source switch, then an event will be entered in the Event Log. You can also configure any of the reporting methods (SNMP trap, e-mail, GPI signal, instrument beeper) to generate an output when the backup test is due. (See EVENT submenus.)
Signal connections

Before you connect signals to the ECO8000 Series, create a table similar to the one shown so that you can plan which signals need to connect to which channels on the ECO8000 Series.

### Table 4: Example plan for connecting signals to an ECO8000

**Channel type connection guidelines.** When connecting signals to the instrument, use the following guidelines:

- Use REF (ELSW) channels to connect non-SDI signals
- Use HREF (Relay) channels to connect SDI signals

You can connect non-SDI signals to HREF (Relay) channels. However, there will be a sync interruption when primary/backup source switches occur.

**Recommended tools.** The ECO8020 uses HD BNC connectors. Due to the tight spacing between connectors, we recommend you use an HD BNC installation and removal tool to connect or disconnect cables on these connectors. One source where you can obtain this tool is provided.

Operating Basics

Operational overview

The ECO8000 Series has three main subsystems:

- Channel Control system
- Configuration and Monitoring system
- Redundant Power system

These three subsystems are loosely coupled to assume maximum reliability of the main ECO function, which is sensing faults on the input signals and switching to a backup if necessary.

**Figure 5: ECO8000 Series subsystems (ECO8020 with Option DPW shown)**

**Channel Control system**

The Channel Control system monitors the level on each input, and switches to the other sync source if a fault occurs. This subsystem is implemented as a simple hardware state machine to maximize reliability. This portion of the instrument is accessed by using the left keyboard, and the status is displayed on the button lights and the per-channel LEDs on the front panel.

If the instrument is in AUTO mode, then the Channel Control system locks out any changes from the other subsystems. This prevents most issues in the other subsystems from impacting the basic operation of the ECO.

When the instrument powers on, the Channel Control system restores all basic configuration settings that were in place when the instrument was powered off. This restoration is independent of the processor booting to run the display and the Configuration and Monitoring system. If the Configuration and Monitoring system is rebooted, the Channel Control system is unaffected.

If the instrument loses power, the REF/ELSW channels will automatically switch from electronic to relay mode to maintain the signal throughput. These channels will automatically switch back to electronic mode when power is restored. When the REF/ELSW channels switch from electronic mode to relay mode and back, the sync on these channels will experience a momentary glitch.
The Configuration and Monitoring system is software based and includes the menus. This system is accessed by using the right keyboard, the LCD, and the Web Interface. If the instrument is in MANUAL mode, then the Configuration and Monitoring system can program the settings in the Channel Control system. For example, it can set the level threshold on each channel, or disable unused channels. When the instrument is in AUTO mode, most configuration is disabled and this subsystem is used for monitoring only.

If the Configuration and Monitoring system processor stops running, a 20 minute watchdog timer in the Channel Control System will automatically cause a processor reboot. If the watchdog timer causes a reboot, the event is entered in the Event Log.

Under certain conditions, such as after several years of continued use, you may want to reboot the Configuration and Monitoring system. You can reboot this system by pressing and holding the ENABLE and RESET buttons for about five seconds until the instrument beeps about five times. Rebooting this system will have no effect on the other subsystems. When this system is rebooted, a power-on self test is performed. (See Power-on self test.)

The top-level Main menu provides access to the following three menus:

- **STATUS**: Use this menu to view instrument faults and the Event Log.
- **CHANNEL**: Use the CHANNEL menu to view and configure the settings for each of the BNC or LTC (Option LTC only) channels.
- **SYSTEM CONFIG**: Use this menu to view and configure all instrument settings except for the channel configuration.

The Redundant Power system monitors each Power Supply module (Option DPW provides a second, backup supply) and switches to the backup if the preferred supply has a problem. This subsystem is independent of the other two systems. The Configuration and Monitoring system can set some parameters in the Redundant Power system and display its status.

The channel configuration for the ECO is done in MANUAL mode. When the system is fully configured, and all channels in use show green status LEDs and good signal margin, switch the instrument to AUTO mode. When the instrument is in AUTO mode, the channel configuration is disabled and the system will react to input signal faults. In AUTO mode, monitoring can be done locally through the LCD or remotely through the Web Interface with no risk of accidental changes that would impact the basic ECO operation.
Controls, connectors, and LED indicators

The following figures show the front-panel controls and rear-panel connectors for the ECO8000 and ECO8020 changeover units. See the following table for a description of each control and connector.

Figure 6: ECO8000 controls and connectors

Figure 7: ECO8020 controls and connectors

1 The LTC 1 channel can be configured as an input or output in the CHANNEL menu. ([See CHANNEL menu.](#))
When the instrument is running, the power supply LEDs indicate the status of the supplies, including the internal fans and which of the supplies is currently powering the instrument.

If the instrument loses power from both supplies, the LEDs continue to provide status to help troubleshoot the root of the problem. In this mode, the LEDs flash to conserve the power in the storage capacitor. Typically the LED flashing should last for 10 minutes after the loss of power.

If both of the supplies are good, the system will use the supply that is configured to be the preferred (active) supply. If one power supply has a problem, the system will switch to the other supply. If either supply can support the instrument load, even if it has a non-fatal problem, the system will choose the best supply and attempt to continue to operate.

The following table shows the states of the AC and DC LEDs on a Power Supply module when the power is on.

**Table 10: Power on LED states for a Power Supply module**

**Troubleshooting power supply problems.** For troubleshooting power supply problems, take these steps:

- If the AC LED is red, verify the power source connecting to the instrument.
- If the DC LED is red, replace the supply module.
- Examine the STATUS menu display and the Event Log readouts to locate details on the nature of the faults.
Power-on self test

The power-on self test is run when the Configuration and Monitoring system first boots up. (See Configuration and Monitoring system.) The test is run regardless of whether the reboot is caused by cycling power or by other means, such as a watchdog timeout or by pressing and holding the ENABLE and RESET keys.

If any failure occurs, it will be reported in the following ways:

- An error message is written on the LCD display and is visible for 2 seconds.
- The STATUS menu FAULT display will indicate that the self-test has failed and display the event code. This display will not be erased until instrument power is cycled.
- A similar message, which includes the event code, is entered in the Event Log.
- If the user-configurable event reporting methods (SNMP trap, e-mail, GPI signal, instrument beeper) are enabled to notify in the event of a voltage error, then a message is sent using the enabled method(s).

Event codes. The self-test event code is a bit-wise value with each fault type assigned a bit. The following table lists the possible error codes.

Initial product setup

Perform the following steps after you have installed the instrument and have connected the input and output signals as described earlier in this manual:

1. Press and hold the PANEL ENABLE button to enable the front-panel control buttons. The instrument beeps when the panel buttons are enabled.

2. Press the MANUAL MODE button to put the ECO8000 Series in Manual mode.

3. Use the CHANNEL menu (See CHANNEL menu.) to configure each of the installed channels as follows:
   a. Disable all unused channels.
   b. Enter identification labels for each channel that will be in use.
   c. Enable/disable the changeover trigger function for each channel that will be in use.
   d. Set the correct threshold level (based on the signal type) for each channel that will be in use. (See Configure the channel inputs and threshold levels.)
   e. For HREF channels, enable/disable the Relay Check function for each channel that will be in use.

4. Configure the primary and backup sync generators which are providing inputs to the ECO8000 Series as follows:
   a. Set the signal outputs to the desired format.
   b. Set the GPI outputs to assert on the desired fault conditions. (See Configure the SPG trigger input.)
   c. Save the configured signal and GPI settings as the power-on preset.

5. Configure the startup delay. (See Configure the startup delay.)

6. Verify the channel threshold settings:
   a. Press the front-panel FAULT RESET button. If the signal thresholds are properly set, the LED indicators for the active channels should all turn green.
   b. Use the DIAGNOSTICS submenu readouts to verify the threshold settings. The levels should be around +3 dB for BNC channels and around +4 dB for LTC channels. (See DIAGNOSTICS submenu.)

7. Press the front-panel AUTO MODE button to put the ECO8000 Series in Auto mode.
8. Verify the installation as follows:
   
   a. Disconnect signal inputs to the ECO8000 Series to simulate errors. Verify a proper source switch.
   
   b. Cycle power on the primary sync pulse generator to verify a switch to the backup source. Repeat on the backup sync pulse generator.
   
   c. Remove power input to the ECO8000 Series to verify correct operation.
   
   d. Cycle power to the entire system to verify correct operation after power is restored.

9. Configure event reporting. (See Configure event reporting.)

Configure the channel inputs and threshold levels

After you have connected the signals, you need to configure each channel you have connected and disable any unused channels. Use the Main menu to select a channel and then press the ENTER button to enter the CHANNEL menu for that channel.

Use the CHANNEL menu to enable/disable the channel, to enable/disable the channel from triggering a changeover if the signal crossed the threshold level, to set the threshold level, and to assign a label to the channel as an aid in identifying the signal connected to that channel. (See CHANNEL menu.)

Verify the signal margin. After you have configured the channels, use the PRI VS THRES and the BACK VS THRS readouts in the DIAGNOSTICS submenu to verify that you have set the thresholds to the proper levels. (See DIAGNOSTICS submenu.)

Terminate the HREF outputs. If the HREF/Relay board outputs are not terminated, it will change the level readings in the DIAGNOSTICS submenu on the selected channel (primary or backup). (See DIAGNOSTICS submenu.) The unselected primary or backup channel is terminated in the ECO8000 Series, but the selected primary or backup channel drives through to the output. Be sure to connect the channel output to the actual load during setup to insure proper configuration.
Configure the startup delay

The Startup Delay function defines the time period after the ECO8000 Series unit powers up, during which the instrument will not make AUTO mode source switches. The Channel Control system (left-hand buttons) and the basic ECO functions are fully operational a second or two after power is applied. However, on loss of power the sync sources may not be ready for a period of time depending on the type of sync pulse generator. While the sync pulse generator is starting up, the ECO may make undesirable source switches as the sync pulse generator signals turn on at different times.

To prevent this, the ECO8000 Series has the ability to delay AUTO mode switching for the period of time set in the Startup Delay function. Additionally, at the end of the start up delay, any yellow LED states are cleared (this is effectively like asserting the Fault Reset button at the end of the timeout period).

Set the startup delay. Perform the following steps to set the startup delay:

1. Cycle the power on the sync pulse generators connected to the ECO8000 Series and measure the amount time until the sync generators are fully booted and the LEDs on the ECO have all turned to yellow.

   **CAUTION.** If the sync generators are configured to use GPS as the timing source and if you have the SPG trigger function configured to monitor the GPS lock, you need to include the time necessary for the sync generators to lock to the GPS signal.

2. Add a few seconds to the measured startup time of the sync pulse generators to provide some margin. For example, if the startup time of the sync pulse generators is 30 seconds, then a good value for the ECO startup delay would be 35 seconds.

3. On the ECO8000 Series, access the SYSTEM CONFIG menu.

4. Press the up (▲) and down (▼) arrow buttons to select STARTUP DELAY.

5. Press the left (◄) or right (►) arrow button to set the startup delay time period.

**NOTE.** You can also use the System tab in the Web Interface to set the startup delay.
Configure the SPG trigger input

The SPG trigger input function allows for a condition that is sensed in the SPG8000 and TG8000 generators to trigger a source changeover on the ECO8000 Series unit. For example, if the genlock on the primary SPG8000 generator loses lock, then that SPG8000 can signal the ECO8000 Series unit to switch to the backup source. Since the SPG8000 and TG8000 generators have comprehensive internal monitoring capability, this allows the overall system to react to more subtle sync conditions, sometimes even before they start to cause problems.

To use this function, the GPI outputs from the primary and backup sync generators must be connected to the LTC/SPG connectors on the ECO8000 Series. If the sync generator is a SPG8000, or a TG8000 with a GPS7 installed, the connections can be done using a 15-pin HD DSUB cable. For other sync generators, a custom wiring harness may be required. See SPG trigger cable connections.

The primary and backup SPG8000 or TG8000 generators need to have the GPI1 output programmed to assert on the combination of events which are intended to cause a changeover trigger. A common set of conditions to enable are “Hardware Fault,” “Near Loss of Lock,” and “Lock Error”. With these settings, the SPG will detect these conditions, assert GPI1, and then the ECO will detect that SPG Trigger input and trigger a changeover.

Configure the SPG alarm delay. To prevent unnecessary signal source changeovers, the SPG8000 and TG8000 generators allow you to configure a time delay before an error condition triggers a changeover. Setting a delay allows time for short errors and warnings to clear before an error signal is sent to trigger a changeover.

With the holdover capability in the SPG8000 and TG8000 generators, a short GPS unlock will not cause any disruption in the syncs, so there is no reason to immediately register an error and trigger an ECO to changeover.

To minimize unnecessary changeovers when using the SPG8000 and TG8000 generators as your signal sources, it is recommended that you configure the alarm delay on the generators for a time period between one and five minutes.
CAUTION. If the primary and backup SPG8000 generators use a common reference, such as the same genlock source or the same GPS antenna, then the primary SPG8000 generator should be set for a longer delay on loss on lock. In case of a failure on the common reference, this allows the primary SPG8000 generator to assert the fault later, which avoids an unnecessary source switch by the ECO8000 Series.

Additionally, the ECO8000 Series may switch sources when the two SPG8000 generators relock if the backup generator locks before the primary generator.

SPG trigger cable connections and GPI configuration. The following table lists the types of connections that can be made from a SPG8000 or TG8000 generator to the LTC/SPG connector on the ECO8000 Series. (See LTC/SPG connector signal pinouts.)
### Table 13: SPG trigger cable connections and GPI configuration

Configure event reporting

The ECO8000 Series monitors several operational parameters and records events when faults occur. (See Fault and event descriptions.)

The instrument provides four methods for the reporting of fault events: SNMP trap, e-mail, GPI signal, and instrument beeper. You can configure which events are reported using one or a combination of these methods.

**SNMP trap reporting.** The instrument can send SNMP traps to up to four IP addresses when enabled events occur. Use the SNMP CONFIG submenu to the SNMP settings (See SNMP CONFIG submenu.) and use the TRAP EVENTS submenu to select which events will be reported using SNMP traps. (See EVENT submenus.)

**E-mail reporting.** The instrument can send e-mail notifications to one e-mail address when enabled events occur. Use the EMAIL REPORTING submenu to configure the e-mail settings (See EMAIL REPORTING submenu.) and use the EMAIL EVENTS submenu to select which events will be reported using e-mail. (See EVENT submenus.)

**NOTE.** The e-mail client used by the ECO8000 Series does not support the TLS (Transport Layer Security) protocol. This protocol is used by most ISPs and free e-mail services like gmail, yahoo, live.com, etc.

Some e-mail servers do not require a login name and password. Before you configure the e-mail reporting parameters, it is recommended that you contact your local network administrator to determine the e-mail server address and to determine whether an e-mail login name and password are required.

**GPI signal reporting.** The instrument can send a GPI signal using the GPIO connector when enabled events occur. (See GPIO connector signal pinouts.) Use the GPI EVENTS submenu to select which events will be reported using the GPIO connector. (See EVENT submenus.)

**Instrument beeper reporting.** The instrument can emit a beep when enabled events occur. Some events, such as a primary/backup source switch, emit a single beep. Other events, such as a primary fault, emit one beep per second for as long as the event is active. Use the BEEPER EVENTS submenu to select which events will be reported using the instrument beeper. (See EVENT submenus.)
The ECO8000 Series has the ability to connect two instruments so that they function as a single larger switch. This function is useful in situations where more channels are needed than can be supported using only one instrument.

To enable the Expansion port function, you need to configure one ECO as the master unit and the other ECO as the slave unit using the SYSTEM CONFIG menu. Both instruments must be connected together through the rear-panel EXPANSION port connectors using a standard Ethernet RJ-45 cable.

After the two instruments are configured as Master and Slave and are connected together, the left-hand buttons (Channel Control system) on the Master unit will control both instruments and the left-hand buttons on the Slave unit will be disabled. The right-hand buttons (Configuration and Monitoring system) on both units will operate normally. This allows the configuration for each ECO to be set independently either through the front panel or the Web Interface.

If the Expansion port connection between two instruments is disconnected, the Slave unit will revert to Master mode so that it will operate independently.

**CAUTION.** A slave unit may change state if the master unit is changed from master to disabled or if the interconnection cable is removed.

*It is recommended that you configure the master and slave units during system setup and that you not change the configuration while the instrument is in operation.*

*To help enforce this recommendation, the ECO8000 Series must be in Manual mode before you can change the state of the expansion port.*

**Independent GPI outputs.** When you use the Expansion port to connect two instruments, the GPI outputs are still independent. For example, if a fault occurs on a master unit signal, only the GPI output on the master unit will be activated. Likewise, if a fault occurs on a slave unit signal, only the GPI output on the slave unit will be activated.

If you want to have a common GPI output for the connected instruments, the two GPI signals can be connected together. The GPI outputs are open with a weak pull-up resistor to 5 V when they are not asserted, and are connected to ground when they are asserted. Therefore, the GPI outputs can be connected in a “wire-OR” so that either unit can drive the GPI output low.

For the GPI inputs, only the master unit needs to driven. The slave unit will follow any changes which are made to the master unit.
How to operate an instrument with two power supplies (Option DPW only)

The standard instrument has one Power Supply module installed. With Option DPW, a second hot-swappable, redundant (backup) Power Supply module is provided. When two Power Supply modules are installed in the instrument, one module is configured as the primary supply and the other is configured as the backup supply.

In the event that the primary supply fails, the backup supply automatically provides power to maintain instrument operation. You can remove and replace a failed supply without having to remove the instrument from operation. (See To hot-swap a Power Supply module.)

If you need to remove one of the two supplies for repair and you do not have a replacement supply available, be sure to install a blank power supply cover into the empty power supply slot (Telestream part number 333-4724-XX).

Power supply status

The status of the Power Supply modules can be viewed from the front of the instrument. On the front panel, the AC and DC indicators illuminate using various colors to show the status of the Power Supply modules. (See Power Supply module LED states.)

You can use the SYSTEM CONFIG menu to perform a load test on the backup supply. You can use the DIAGNOSTICS menu to view voltage levels in the instrument.

Temperature weighted hours (TWH)

The instrument keeps track of the age of a Power Supply module by calculating the temperature weighted hours (TWH). You can view the TWH of each installed supply using the DIAGNOSTICS submenu in the SYSTEM CONFIG menu.

TWH calculation method. When the outside air temperature is at 25 °C or cooler, the Power Supply module is expected to last 15 years. As the outside air temperature rises to the maximum operating temperature of 50 °C, the expected life of the supply decreases to 5 years. Every hour, the instrument measures the supply temperature and increments the temperature weighted hours count in response to the measured temperature.

When the TWH value reaches a value of 131,400 hours, then an entry will be made in the Event Log and notifications will be sent using the enabled reporting methods (SNMP trap, e-mail, GPI signal, instrument beeper).

NOTE. When two Power Supply modules are installed, the active supply runs warmer than the backup supply. Therefore, the TWH of the active supply will increase faster than the backup supply.
When two Power Supply modules are installed in the instrument, one is configured as the primary supply and the other is configured as the backup supply. In the event that the primary supply fails, the backup supply automatically provides power to maintain instrument operation.

**NOTE.** The preferred supply configuration only applies if two Power Supply modules are installed and both of the supplies are connected to a power source. If there are two Power Supply modules installed but one of the supplies has a failure, the good supply will be used to power the instrument regardless of the preferred supply configuration.

The recommended usage strategy is to configure one supply as preferred, and use the second supply only in case the first supply has a failure. This usage strategy allows the backup supply to have the maximum remaining life when it is needed.

The preferred supply configuration is not set as part of the Hardware Initialization function. Therefore, the preferred supply configuration will not change when you reset the instrument using the Hardware Initialization function.

Perform the following steps to configure which Power Supply module is the preferred (active) supply:

1. Check the status of the front-panel DC LED indicators on both supplies:
   - Bright green indicates the current preferred (active) supply
   - Dim green indicates the current inactive (backup) supply

   **NOTE.** If the color of the LED indicators is other than bright or dim green, service the faulty Power Supply module before proceeding.

2. Check the temperature weighted hours of the installed supplies:

   **NOTE.** It is recommended that you configure the supply with the most temperature weighted hours to be used as the primary preferred supply. This allows for the newer supply to be preserved so it can provide the best possible backup should the primary supply fail. For more information about temperature weighted hours, see the ECO8000 Series Quick Start User Manual.

   a. From the top-level Main menu, press the up (▲) or down (▼) arrow button to select SYSTEM CONFIG, and then press the ENTER button to access the SYSTEM CONFIGURATION menu.
b. Press the up (▲) arrow button to select **DIAGNOSTICS**, and then press the **ENTER** button to access the **DIAGNOSTICS** submenu.

c. Press the up (▲) or down (▼) arrow button to select **PS1 HOURS**. The second line of the display lists the number of hours the supply has been the active supply.

d. Press the right (►) arrow button to select **PS1 TW HOURS**. The second line of the display lists the number of temperature weighted hours of the first supply. Note the number of hours of hours shown.

e. Press the down (▼) arrow button to select **PS2 HOURS**.

f. Press the right (►) arrow button to select **PS2 TW HOURS**. The second line of the display lists the number of temperature weighted hours of the second supply. Note the number of hours of hours shown.

g. Press the **BACK** button to exit the **DIAGNOSTICS** submenu and return to the **SYSTEM CONFIGURATION** menu.

3. If the Power Supply module with the greatest number of temperature weighted hours is not the currently the preferred supply, then continue this procedure. Otherwise, you do not need to change the preferred supply configuration.

4. If you want to change the preferred supply configuration, press the up (▲) or down (▼) arrow button to select **PREFERRED SUPPLY**.

5. Press the left (◄) or right (►) arrow button to display the supply you want to be the primary (active) supply: PS1 or PS2. The second line of the display shows the selected supply and its status: **Active**, **Preferred** or **Inactive**.

**NOTE.** When viewed from the front of the instrument, **PS1** is the left Power Supply module and **PS2** is the right Power Supply module.

6. If status of the desired supply is Inactive, press the **ENTER** button to change the status to Active, Preferred. The front-panel DC indicator for the selected supply should change from dim green to bright green.
Perform these steps to hot swap a power supply module (replace the power supply while the instrument is in operation):

1. Use the DIAGNOSTICS submenu or the states of the front-panel AC and DC LEDs (See Power Supply module LED states.) to identify the faulty Power Supply module.

**CAUTION.** To prevent an unexpected shutdown of the instrument, be sure to remove the correct Power Supply module if you are replacing a faulty module.

When viewed from the front of the instrument, Power Supply 1 is the left Power Supply module and Power Supply 2 is the right Power Supply module.

2. Remove the desired Power Supply module by unscrewing the front-panel retaining screw, and then pulling the module out of the instrument.

![Figure 8: Removing a Power Supply module](image-url)
3. Insert the replacement supply module into the instrument until it latches into place, and then turn the retaining screw clockwise to secure the module in the chassis.

![Figure 9: Installing the backup or replacement Power Supply module](image)

4. Check that the status LEDs of the Power Supply module you just installed. Both LEDs should be bright green or dim green. (See Power Supply module LED states.)

5. If desired, change the preferred supply configuration. (See Configuring the preferred (active) supply (Option DPW only).)

How to upgrade the instrument firmware

Telestream releases software and firmware updates for products to add new features and to fix product problems. You can find the latest firmware for your product on our website: www.telestream.net/video/resources.htm#Software.

Be aware of the following upgrade considerations:

- We recommend that the instrument be out of service to perform the upgrade
- You must perform the firmware upgrade using the instrument front panel (you cannot use the Web Interface)
- The instrument must be connected to the same Ethernet network as the computer you will use to perform the upgrade
Before you begin the upgrade, perform the following steps to determine if the firmware on your instrument should be upgraded.

**CAUTION.** The firmware upgrade process may disrupt the sync signals. We recommend that you upgrade the firmware only when the instrument is not in service.

1. Power on the instrument.

2. Verify the current firmware version installed on the instrument:
   a. Press the **BACK** button as necessary to return to the top-level Main menu.
   b. Press the up (▲) or down (▼) arrow button to select **SYSTEM CONFIG**, and then press the **ENTER** button to access the SYSTEM CONFIG menu.
   c. Press the up (▲) or down (▼) arrow button to select **FW VERSION**.
   d. Press the left (◄) or right (►) arrow button to note the firmware version number.

<table>
<thead>
<tr>
<th>Installed firmware version number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

3. Verify the latest version of software at the Web site:
   a. On a computer, use a web browser to navigate to the Telestream URL:
      
      www.telestream.net/video/resources.htm#Software.
   b. Scroll down to “Software” and locate the firmware-upgrade package for your instrument.
   c. Note the latest version number of the firmware-upgrade package(s).

<table>
<thead>
<tr>
<th>Website firmware version number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

4. If the latest firmware version at the website is the same as the version installed on your instrument, you do not need to upgrade the instrument firmware.

5. If the latest firmware version at the website is newer than the version on your instrument, download the latest firmware package to your computer.
6. After the firmware package ZIP file is downloaded, extract the following files into the directory of your choice: transfer.exe and firmware.pkg.

**NOTE.** The two upgrade files need to be located in the same directory for the upgrade to work.

If a readme.txt file is included in the firmware package, be sure to read the file before you upgrade the firmware.

7. If the firmware in your instrument needs to be upgraded, verify which options are currently installed before you install the software. After you install the upgrade, you will verify that any previously installed options are still enabled.

   a. Connect the instrument and computer to your local Ethernet network. *(See Network installation.)*

   b. Press the front-panel BACK button as necessary to access the top-level Main menu.

   c. Press the up (▲) or down (▼) arrow button to select SYSTEM CONFIG, and then press the ENTER button to access the SYSTEM CONFIG menu.

   d. Press the up (▲) or down (▼) arrow button to select INSTALLED OPTION.

   e. On the second line of the display, note the installed hardware option boards.

   f. Press the ENTER button to access the OPTIONS ENABLED submenu.

   g. On the second line of the display, note the installed software options. **None** is displayed if no software option is installed; **LTC** is displayed if Option LTC is installed.
The time required to complete the firmware upgrade is approximately 10 minutes.

**CAUTION.** The firmware upgrade process may disrupt the sync signals. We recommend that you upgrade the firmware only when the instrument is not in service.

After the instrument has started to erase internal flash, do not remove power from the instrument. If you do so, the instrument flash may be corrupted and you will have to run the recovery procedure. *(See Firmware upgrade troubleshooting.)*

**NOTE.** If power to the instrument is lost before it begins erasing the internal flash, you can restart the firmware upgrade after the instrument reboots. If the instrument displays only a blank screen after power is reapplied, see the troubleshooting section for help. *(See Firmware upgrade troubleshooting.)*
**Firmware upgrade procedure**

Use the following steps to upgrade the instrument firmware using a network connection:

1. Connect the instrument and a Windows PC to your local Ethernet network or directly connect the instrument to a Windows PC. *(See Network installation.)*

2. Power on the instrument.

3. Prepare the instrument for the firmware upgrade:
   
   a. Press and hold the PANEL ENABLE button to enable the front-panel control buttons. The instrument beeps when the panel buttons are enabled.
   
   b. Press the front-panel MANUAL MODE button to put the instrument in Manual mode.
   
   c. Press the front-panel BACK button as necessary to access the top-level Main menu.
   
   d. Press the up (▲) or down (▼) arrow button to select SYSTEM CONFIG, and then press the ENTER button to access the SYSTEM CONFIG menu.
   
   e. Press the up (▲) or down (▼) arrow button to select FIRMWARE UPGRADE.
   
   f. Press the ENTER button. A confirmation message is displayed as shown.

   ![Confirmation message](image)

   g. Press ENTER to proceed with the upgrade or press the BACK button to cancel the upgrade.
   
   h. A second confirmation is displayed as shown.

   ![Confirmation message](image)

   i. Press the ENTER button to proceed with the upgrade or press the BACK button to cancel the upgrade.
   
   j. When you press ENTER, a **Waiting for network** message is displayed along with the IP address of the instrument. This indicates the instrument is ready to be upgraded.
4. Perform the firmware upgrade:
   
a. On the PC, double-click the `transfer.exe` file to launch the transfer program.

   b. Type the IP address of the instrument you are upgrading, and then press **Enter**. This starts the firmware upgrade process. Messages indicating the progress of the upgrade appear in the transfer program window and on the instrument display.

   **CAUTION.** After the instrument has started to erase internal flash, do not remove power from the instrument. If you do so, the instrument flash may be corrupted and you will have to run the recovery procedure. (See Firmware upgrade troubleshooting.)

   **NOTE.** The upgrade will not proceed until all of the firmware data is transferred to the instrument. After the upgrade has started, the instrument will attempt to complete the upgrade even if it loses contact with transfer.exe. So that you can monitor the progress of the upgrade, it is suggested that you do not close the transfer.exe window until the transfer utility asks for another IP address.

5. If the instrument does not reboot at the completion of the firmware upgrade, remove and then reconnect the power cable.

6. See *Verify the firmware upgrade* and reinstall user files.
Verify the firmware upgrade

1. After the instrument reboots at the end of the upgrade process, press the SYSTEM button to access the SYSTEM menu.

2. Press the up (▲) or down (▼) arrow button to select SYSTEM CONFIG, and then press the ENTER button to access the SYSTEM CONFIG menu.

3. Press the up (▲) or down (▼) arrow button to select FW VERSION.

4. Press the left (◄) or right (►) arrow button to verify that the displayed firmware version is the same version as the firmware package you used to perform the upgrade.

5. Press the up (▲) or down (▼) arrow button to select INSTALLED OPTION.

6. On the second line of the display, verify that installed hardware option boards are the same as before the upgrade.

7. Press the ENTER button to access the OPTIONS ENABLED submenu.

8. On the second line of the display, verify that the installed software option list is the same as before the upgrade. None is displayed if no software option is installed; LTC is displayed if Option LTC is installed.

Firmware upgrade troubleshooting

If a power failure occurs during the upgrade and the instrument has a blank screen when you reapply power, perform the following procedure.

1. Connect an Ethernet cable between the instrument and your computer or local Ethernet network.

2. Remove the power cable to turn off the instrument.

3. Press and hold the up (▲) arrow button and then reconnect the power cable. Continue to hold the up (▲) arrow button until the message Select upgrade network mode: appears on the top line of the LCD display.
4. When the message **Select upgrade network mode:** is displayed, press the left (◄) or right (►) arrow button to select from the following modes and then press the **ENTER** button.

   - **DHCP** – Use this selection if the instrument is connected to a network with DHCP support. An IP address will be assigned to the instrument from your network server.

   - **Local IP (192.168.1.1)** – Use this selection if the instrument is connected to a network without DHCP support or is connected to a standalone computer. In this case, the factory default, static IP address of 192.168.1.1 will be used for the upgrade.

**NOTE.** When you select either the Local IP or the Saved static IP upgrade mode, you cannot edit the displayed IP address. The IP address cannot be edited when the instrument is in recovery mode.

- **Quit and continue booting** – Use this selection to quit the upgrade process and leave the instrument in its current condition.

5. If you did not select Quit and continue booting in the previous step, the top line of the instrument display will show the message **Waiting for network connection** and the second line will list an IP address. Make a note of the displayed IP address.

6. Enter the IP address you noted in the previous step into the upgrade transfer application window on your PC to restart the upgrade process.

**CAUTION.** To prevent upgrade failure, leave the instrument power on during the upgrade process. The upgrade process may take up to 15 minutes to complete.

7. When the upgrade is complete, the instrument should reboot. If it does not, cycle the power.

If you continue to experience an upgrade problem, contact customer support:

[www.telesstream.net/telestream-support/video/support.htm](http://www.telesstream.net/telestream-support/video/support.htm).
How to use the Event Log and event history

Outputting the Event Log

Using the Web Interface, you can save the contents of the Event Log to a file.

1. Connect to the instrument using the Web Interface.

2. In the Status tab, use the Event Log drop-down box to select how you want the log formatted. You can sort the log by event type, event time, or by the last event by type.

3. Click the View Event Log button.

**NOTE.** If you have your web browser configured to block popups, you will not be able to view the Event Log.

4. Save the displayed log as an HTML file on your local computer.

5. On your computer, use Excel to open the saved HTML file.

**NOTE.** If you save the Event Log directly as an Excel file, the cell sizes will not be correctly formatted for the size of the cell contents.
The following table describes the faults and events that may be reported by the instrument.

**Table 17: Fault and event descriptions**

<table>
<thead>
<tr>
<th>Fault or event</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary fault</td>
<td>One or more of the active primary input channels is being driven by a signal that is below the configured level threshold for that channel.</td>
</tr>
<tr>
<td>Backup fault</td>
<td>One or more of the active backup input channels is being driven by a signal that is below the configured level threshold for that channel.</td>
</tr>
<tr>
<td>Pri/Backup switch</td>
<td>The instrument has switched sources from primary to backup (or vice-versa), either manually or automatically.</td>
</tr>
<tr>
<td>PS&lt;1 or 2&gt; LD test fail</td>
<td>The indicated Power Supply module failed the last manual or automatic load test (load tests run every 24 hours during normal operation if two power supplies are installed).</td>
</tr>
<tr>
<td>PS&lt;1 or 2&gt; AC fault</td>
<td>The AC input to the indicated power supply has failed.</td>
</tr>
<tr>
<td>PS&lt;1 or 2&gt; DC fault</td>
<td>The 12 V DC output of the indicated power supply has failed (reported only on supplies which have a power)</td>
</tr>
<tr>
<td>PS&lt;1 or 2&gt; fan fault</td>
<td>The fan in the indicated power supply has failed.</td>
</tr>
<tr>
<td>PS&lt;1 or 2&gt; warning</td>
<td>The 12 V DC output level on the indicated supply is above or below the nominal range.</td>
</tr>
<tr>
<td>PS&lt;1 or 2&gt; temp fault</td>
<td>The indicated power supply is over temperature.</td>
</tr>
<tr>
<td>PS&lt;1 or 2&gt; TWH warning</td>
<td>The TWH (Temperature Weighted Hours) limit has been exceeded on the indicated power supply. (See temperature weighted hours (TWH).)</td>
</tr>
<tr>
<td>PS switchover</td>
<td>On instruments with two Power Supply modules, the instrument has switched from using one supply to using the other supply.</td>
</tr>
<tr>
<td>Board supply</td>
<td>A power supply has failed on the indicated circuit board. (See Diagnostic board voltage error codes.)</td>
</tr>
<tr>
<td>Temperature fault</td>
<td>The instrument is operating at too high a temperature.</td>
</tr>
<tr>
<td>Back test due</td>
<td>The recommended test interval for checking the backup channels has been exceeded.</td>
</tr>
<tr>
<td>Post failed</td>
<td>A failure was detected during the power-on self test. (See Power-on self test.)</td>
</tr>
<tr>
<td>HREF relay fail</td>
<td>A relay failure was detected on one of the HREF channels.</td>
</tr>
<tr>
<td>Reboot normal</td>
<td>The instrument was rebooted manually.</td>
</tr>
<tr>
<td>Reboot watchdog</td>
<td>The CPU (Configuration and Monitoring system) was rebooted automatically when its watchdog signal was not detected.</td>
</tr>
</tbody>
</table>
Diagnostic board voltage error codes

Diagnostic voltages are read by the instrument every second and any out of tolerance results are sent to the Fault Manager. If any voltage failure occurs, it will be reported in the following ways:

- An error message is written on the front panel LCD in the STATUS: FAULTS display with the code “0xmn” listed in the box representing the error code as shown. The letter “m” represents the board number and “n” represents the index on that board. In the case of board 0, the leading 0 is truncated.

- A similar message, which includes the event code, is entered in the Event Log.

- If the user-configurable event reporting methods (SNMP trap, e-mail, GPI signal, instrument beeper) are enabled to notify in the event of a voltage error, then a message is sent using the enabled method(s).

Event codes. The event code consists of two numbers, where the first number represents the board and the second number represents the voltage index of the board. The Main board number is 0 and the module board numbers are 1 to 4.

Depending on the configuration of your instrument, only some of the modules may be installed. The relationship between the module number and the channel numbers of an instrument are as follows:

<table>
<thead>
<tr>
<th>Instrument model</th>
<th>Module number</th>
<th>Channel numbers</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECO8000</td>
<td>1</td>
<td>1–3</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>4–6</td>
</tr>
<tr>
<td></td>
<td>3</td>
<td>7–9</td>
</tr>
<tr>
<td>ECO8020</td>
<td>1</td>
<td>1–5</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>6–10</td>
</tr>
<tr>
<td></td>
<td>3</td>
<td>11–15</td>
</tr>
<tr>
<td></td>
<td>4</td>
<td>16–20</td>
</tr>
</tbody>
</table>

The modules can be either REF/ELSW or HREF/Relay boards. The REF boards do not have the +3.1RL voltage. The index number is the same for all module types. The following table lists the possible code combinations.
### Table 19: Board voltage error codes

Menus

This section provides diagrams and descriptions of the various instrument settings and readouts available in the front-panel menu system. All of the settings can also be configured using the Web Interface except for the following (See How to use the Web Interface):

- SNMP configuration settings
- Network configuration settings
- Web Interface level of control setting

Menu navigation

To navigate through the menu system, use the four arrow buttons in conjunction with the ENTER and BACK buttons. The LCD display uses various symbols to help you navigate the menus and make selections:

- **Carriage return.** As shown, when a carriage return symbol appears in the right bottom corner of a display, this indicates that you can either press the ENTER button to access a submenu or that you need to press the ENTER button to make a setting change.

- **Bullet.** As shown above, when a bullet symbol appears as the first character on the bottom line of the display, this indicates that there are multiple setting selections available and that the displayed selection is the currently selected setting. Press the left or right arrow buttons to view other possible selections and press the ENTER button to implement a setting change.

- **Left and right arrows.** As shown, when left and right arrows appear on the far right side of the display, this indicates that you can view more diagnostic or event readouts using the left and right arrow buttons.

- **Indentation.** As shown above, when right-arrow characters appear as the first characters on the top line of the display, this indicates that you have entered a submenu. The number of right-arrow characters represents the number of times you need to press the BACK button to return to the top-level menu.
Menu readout updates

Many of the menu readouts are static and do not update when instrument conditions change. To view the latest menu readout information, press the BACK button to exit the current menu and then press the ENTER button to reenter the menu and view the current readout information. This is especially useful when viewing items in the STATUS menu.

Main menu

The Main menu is the top level menu and appears by default when the instrument is turned on. Use the Main menu to access the STATUS, CHANNEL, and SYSTEM CONFIG menus. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections. If you have navigated to a submenu, you may need to press the BACK button several times to return to this top-level menu.

Figure 11: Main menu
**STATUS.** Select this menu item and press the ENTER button to access the STATUS menu, which you can use to view instrument faults and the Event Log contents. ([See STATUS menu.](#))

**CH1 ELSW <status>.** Select this menu item and press the left (◄) or right (►) arrow button to select the desired BNC or LTC (Option LTC only) channel. After you select the desired channel, press the ENTER button to access the menu for the selected channel, which you can use to view and configure the channel settings. ([See CHANNEL menu.](#))

The top line of the display lists this information:

- The channel or LTC number.
- The type of channel: ELSW, Relay, or LTC.
- The channel status or the current threshold level. If the selected channel is disabled, “DISABLED” is displayed after the channel type. If the selected channel is enabled, then the current threshold level for the channel is displayed. For example, if the threshold is set to NTSC, then “NTSC” will be displayed after the channel type.

**SYSTEM CONFIG.** Select this menu item and press the ENTER button to access the SYSTEM CONFIG menu, which you can use to view or configure various instrument settings. ([See SYSTEM CONFIG menu.](#))
To access this menu, select STATUS in the Main menu and press the ENTER button. (See Main menu.) Use the STATUS menu to view instrument faults and the Event Log contents. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

**NOTE.** Many of the STATUS menu readouts are static and do not update when instrument conditions change. To view the current status information, press the BACK button to exit the current menu and then press the ENTER button to reenter the menu.

![STATUS menu diagram](image)
FAULT. Select this menu item to view any instrument faults. If no faults are currently active, “No Fault” is displayed. If more than one fault is currently active, press the left (◄) or right (►) arrow button to view the additional faults.

EVENT LOG (BY TYPE). Select this menu item and press the ENTER button to access the EVENT LOG (BY TYPE) submenu, which you can use to view the last 1024 events, sorted first by the event type, and then sorted by time within each event type. (See EVENT LOG (BY TYPE) submenu.)

EVENT LOG (BY TIME). Select this menu item and press the ENTER button to access the EVENT LOG (BY TIME) submenu, which you can use to view the last 1024 events sorted by the time of their occurrence. (See EVENT LOG (BY TIME) submenu.)

LAST EVENT BY TYPE. Select this menu item and press the ENTER button to access the LAST EVENT BY TYPE submenu, which you can use to view the last instance of each event type, regardless of how many events of other types have occurred. (See LAST EVENT BY TYPE submenu.)

CLEAR EVENT LOG. Select this menu item and press the ENTER button to clear the Event Log. In the confirmation screen, press ENTER to clear the Event Log or press BACK to return to the STATUS menu.

EVENT LOG (BY TYPE) submenu

To access this menu, select EVENT LOG (BY TYPE) in the STATUS menu and press the ENTER button. (See STATUS menu.) Use this submenu to view the last 1024 events, sorted first by the event type, and then sorted by time within each event type. (See How to use the Event Log and event history.)

Press the up (▲) or down (▼) arrow button to select an event type, and then press the left (◄) or right (►) arrow button to view additional events for the selected event type, if any exist. The display readout shows “No occurrence found” if no events have occurred for an event type. If an event has occurred, the display readout shows the event date and time in the following format: MM:DD:YYYY HH:MM:SS.
Press ENTER in the STATUS menu with EVENT LOG (BY TYPE) selected

Figure 13: EVENT LOG (BY TYPE) submenu – part 1

Continued on the next page
Figure 14: EVENT LOG (BY TYPE) submenu – part 2
Figure 15: EVENT LOG (BY TYPE) submenu – part 3
EVENT LOG (BY TIME) submenu

To access this menu, select EVENT LOG (BY TIME) in the STATUS menu and press the ENTER button. (See STATUS menu.) Use this submenu to view the last 1024 events sorted by the time of their occurrence. (See How to use the Event Log and event history.)

The oldest event, if any, is displayed first. Press the right (►) arrow button to advance through the time-ordered list, or press the left (◄) arrow button to view the most recent fault and to progress backwards through the list.

The display readout shows “No event in the log” if no events have occurred. If an event has occurred, the display readout shows the event date and time in the following format: MM:DD:YYYY HH:MM:SS.

![Figure 16: EVENT LOG (BY TIME) submenu]

LAST EVENT BY TYPE submenu

To access this menu, select LAST EVENT BY TYPE in the STATUS menu and press the ENTER button. (See STATUS menu.) Use this submenu to view the last instance of each event type, regardless of how many events of other types have occurred. (See How to use the Event Log and event history.)

Press the up (▲) or down (▼) arrow button to select an event type. The display readout shows “No occurrence found” if no events have occurred for an event type. If an event has occurred, the display readout shows the event date and time in the following format: MM:DD:YYYY HH:MM:SS.

The menu readouts appear in the same order as in the EVENT LOG (BY TYPE) submenu. (See Figure 13 on page 58.)
To access this menu, select the desired BNC or LTC (Option LTC only) channel in the Main menu and press the ENTER button. (See Main menu.) Use the CHANNEL menu to view and configure the settings for each of the BNC or LTC channels. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

Figure 17: CHANNEL submenu
**INPUT-OUTPUT.** This menu item appears for only the LTC 1 channel. Select this menu item and press the left (◄) or right (►) arrow button to set the LTC 1 channel to be an output or an input. When the LTC 1 channel is configured as an input, this allows both ports to connect so that an LTC input can drive the common line and input timecode to both SPG8000 generators.

You should set the LTC 1 channel to input only if your sync generators are using LTC as their time source input.

**ACTIVE.** Select this menu item and press the left (◄) or right (►) arrow button to enable or disable the selected channel. Press the ENTER button to implement the selection. You should disable any channel that is not going to be used.

**TRIGGER.** When the selected channel is enabled (active), select this menu item and press the left (◄) or right (►) arrow button to enable or disable the selected channel from triggering a changeover if the signal level crosses the configured threshold level. Press the ENTER button to implement the selection. For channels with the trigger function disabled, the levels will still be shown on the front panel LEDs, but the levels will not be used in the decision to switch signal sources.

**THRESHOLD.** When the selected channel is enabled (active), select this menu item and press the left (◄) or right (►) arrow button to select the threshold level that will trigger a changeover if the signal level crosses that threshold level. Press the ENTER button to implement the selection. The available threshold levels depend on the type of the selected channel: ELSW, relay, or LTC. (See Figure 17.)

If you set the threshold level to “Custom,” you can use the left (◄) or right (►) arrow button to set the threshold level. After you set the threshold level, press the BACK button to exit the custom level edit mode. It is suggested that you set the level so that the signal is near +3 dB relative to the threshold level as shown. For LTC channels, the level should be +4 dB relative to the threshold level.

![Custom level threshold display](image)

*Figure 18: Custom level threshold display*
**RELAY CHECK.** When the selected channel is a HREF relay channel, select this menu item and press the left (◀) or right (▶) arrow button to enable or disable the Relay Check function for the selected channel. Press the ENTER button to implement the selection.

The HREF (Relay) channels rely exclusively on relays for signal switching. On rare occasions after long periods of inactivity, the relay contacts can build up a nonconductive coating on the relay contacts. This coating can create a condition so that when a fault occurs and the ECO switches primary/backup sources, the sync signal will not get through the ECO to the load.

When enabled, the Relay Check function measures the signal level on each HREF input before and after every changeover switch. If the signal level indicates that the channel is not connected to a load, then it is possible that the relay is not properly closed for that channel. In that case, the instrument will cycle the relay 20 times to attempt to wear through the layer of nonconductive coating to restore the connection.

**CAUTION.** Do not enable the Relay Check function on channels that are not terminated, since the unterminated output looks similar to an open relay and will cause unfounded Relay Check events.

**LABEL.** Select this menu item and press the ENTER button to access the edit mode for the channel label. Use the channel label to help identify channels. For example, you could label a channel “Master Sync” if that channel was carrying the master sync signal for your video system. The channel labels can be up to 16 characters in length.

Press the left (◀) or right (▶) arrow button to select a label digit and then press the up (▲) or down (▼) arrow button to change the value of the selected digit. After you edit the channel label, press the ENTER button to implement the change. Press the BACK button to exit the label edit mode without saving any changes.

**NOTE.** It is easier to enter the channel labels using the Web Interface. *(See How to use the Web Interface.)*
SYSTEM CONFIG menu

To access this menu, select SYSTEM CONFIG in the Main menu and press the ENTER button. Use this menu to view and configure all instrument settings except for the BNC and LTC channels. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

Figure 19: SYSTEM CONFIG menu – part 1
Figure 20: SYSTEM CONFIG menu – part 2
NOTE. The ECO8000 Series must be in Manual mode to make changes in the SYSTEM CONFIG menu that will effect the basic ECO operation. Examples of settings that can only be made in Manual mode are the SPG input trigger, expansion port, startup delay, front panel timeout, initialize hardware, and force relay path.

If these types of changes are attempted when the instrument in Auto mode, a warning message will pop up on the LCD display and the Web Interface. Most of the menus in the SYSTEM CONFIG menu do not require the instrument to be in Manual mode.
SPG INPUT TRIGGER. Select this menu item and press the left (◄) or right (►) arrow button to enable or disable the SPG Input Trigger function. Press the ENTER button to implement the selection. When enabled, the SPG Input Trigger function allows an SPG8000 generator to trigger a changeover if it detects an error condition, such as the loss of genlock. (See Configure the SPG trigger input.)

EXPANSION PORT. Select this menu item and press the left (◄) or right (►) arrow button to enable or disable the Expansion Port. Press the ENTER button to implement the selection. When enabled, you can connect multiple ECO8000 Series instruments together to act as a single changeover unit. (See Configure the Expansion port.)

STARTUP DELAY. Select this menu item and press the left (◄) or right (►) arrow button to adjust the startup delay. You can adjust the delay between 0 and 300 seconds in 5 second increments. (See Configure the startup delay.)

PREFERRED SUPPLY. Select this menu item and press the left (◄) or right (►) arrow button to select which of the two installed Power Supply modules will be the preferred (active) supply. This menu selection applies only when Option DPW is installed. (See Configuring the preferred (active) supply (Option DPW only).)

NETWORK CONFIG. Select this menu item and press the ENTER button to access the NETWORK CONFIG submenu, which you can use to configure the network settings or to view the MAC address of the instrument. (See NETWORK CONFIG submenu.)

WEB USER INTERFACE. Select this menu item and press the left (◄) or right (►) arrow button to select the level of instrument control that can be exercised by a Web browser connecting to the instrument. (See How to use the Web Interface.) These settings are available:

- **Safe Control:** This setting allows control of most instrument settings from a web browser. The front-panel buttons for the Channel Control system (AUTO/MANUAL mode selection, PRIMARY/BACKUP source selection, and FAULT RESET) are excluded.

- **Extended Control:** This setting allows control of all instrument settings from a web browser, including the Channel Control system.

- **Read Only:** This setting allows read-only access to instrument settings from a web browser.

- **Disable:** This setting disables a web browser from connecting to the instrument.

SNMP CONFIG. Select this menu item and press the ENTER button to access the SNMP CONFIG submenu, which you can use to configure the SNMP trap addresses, to configure the public and private community strings, and to configure which events will trigger an SNMP trap to be sent from the instrument. (See...
SNMP CONFIG submenu.

**EMAIL REPORTING.** Select this menu item and press the ENTER button to access the EMAIL REPORTING submenu, which you can use to configure the e-mail login name, password, and to/from addresses, and to configure which events will trigger an e-mail to be sent from the instrument. (See EMAIL REPORTING submenu.)

**INTERNAL CLOCK.** Select this menu item and press the ENTER button to access the INTERNAL CLOCK submenu, which you can use to set the local time of the instrument and to configure the Daylight Savings Time (DST) schedule. (See INTERNAL CLOCK submenu.)

**FRONT PANEL TIMEOUT.** Select this menu item and press the left (◄) or right (►) arrow button to set the front panel time-out period to either 1 minute or 5 minutes. Press the ENTER button to implement the selection. When the front panel of the instrument has not been used for the amount of time configured as the time-out period, the instrument control buttons become inoperative. In this case, press and hold the PANEL ENABLE button until the instrument beeps.

The control buttons include the FAULT RESET, AUTO MODE, MANUAL MODE, PRIMARY SOURCE, and BACKUP SOURCE buttons. The navigation arrow buttons and the ENTER and BACK buttons are always operational and are not affected by the time-out setting.

The backlight of the LCD display turns off after 5 minutes of inactivity to preserve the life of the backlight. When the instrument is powered on and the LCD display is off, press any of the menu navigation buttons to turn on the display backlight.

**LCD CONTRAST.** Select this menu item and press the left (◄) or right (►) arrow button to adjust the contrast of the LCD display. You can adjust the contrast setting between 0 and 8.

**GPI EVENTS.** Select this menu item and press the ENTER button to access the GPI EVENTS submenu, which you can use to select which events will trigger a GPI signal to be sent from the instrument using the GPIO port. Enabled events will cause pin 10 of the port to go low. (See GPIO connector signal pinouts.) (See EVENT submenus.) (See Fault and event descriptions.)

**BEEPER EVENTS.** Select this menu item and press the ENTER button to access the BEEPER EVENTS submenu, which you can use to select which events will trigger a beep sound from the instrument. (See EVENT submenus.) (See Fault and event descriptions.)
**HW VERSION.** Select this menu item to view the hardware version of the instrument.

**PLD VERSION.** Select this menu item to view the PLD versions of the instrument. Press the left (◄) or right (►) arrow button to view additional PLD versions.

**PS COMBINER VERSION.** Select this menu item to view the version of the Power Supply Combiner installed in the instrument.

**FW VERSION.** Select this menu item to view the firmware version installed in the instrument. Press the left (◄) or right (►) arrow button to toggle the view between the firmware version number and the version date.

**FIRMWARE UPGRADE.** Select this menu item and press the ENTER button to initiate an upgrade of the instrument firmware. (See How to upgrade the instrument firmware.)

**INSTALLED OPTION.** Select this menu item to view the options installed in the instrument. The second line of the display identifies the type of channels installed in the instrument: REF (ELSW) or HREF (Relay). Press the ENTER button to access the OPTIONS ENABLED submenu, which you can use to view the installed software option (None or LTC) or to enter a new option key to enable Option LTC. (See OPTIONS ENABLED submenu.)

**PS LOAD TEST.** Select this menu item and press the ENTER button to manually initiate a load test on the backup Power Supply module. Option DPW must be installed for this menu selection to be operational. A load test is performed automatically every 24 hours during instrument operation. You can view the results of the load test using the Event Log and diagnostic readouts. (See How to use the Event Log and event history.)

**INITIALIZE HW.** The Initialize Hardware function is intended for use only during the manufacturing and service of the instrument. Use of this function is not recommended during the normal operation of the instrument. Select this menu item and press the ENTER button to initiate a reset of the instrument hardware.

⚠️ **CAUTION.** To prevent a loss of instrument configuration and a disruption in the output signals, do not perform the Initialize Hardware function while the instrument is in service.
When this function is activated, the CPU determines which hardware and software options are installed and then configures the following system parameters to a default state:

- Enables all of the installed channels including the LTC channels if Option LTC is installed
- Arms all of the installed BNC channels as switchover triggers (but not the LTC channels if Option LTC is installed)
- Sets all thresholds to the default values (NTSC for BNC channels, 2 V for LTC channels if Option LTC is installed)
- Disables the Relay Check function
- Disables the SPG input trigger function
- Sets the Startup Delay setting to 15 seconds

FORCE RELAY PATH. Select this menu item and press the left (◄) or right (►) arrow button to enable or disable the Force Relay Path function for all installed REF (ELSW) channels. Press the ENTER button to implement the selection.

**CAUTION.** The Force Relay Path function is intended only for troubleshooting when the instrument is not in service. If the Force Relay Path function is asserted and a channel threshold level is set incorrectly, it is possible to make the ECO8000 Series continuously toggle between the primary and backup sources.

The REF option channels (Electronic 50 MHz Fast switch “ELSW” channels) have two signal paths: an electronic switch path that works when the power is on and a backup path through latching relays that takes over when the instrument is turned off or loses power. When the FORCE RELAY PATH menu option is enabled, this allows the relay path to be used while the instrument power is on. This function is useful for troubleshooting but is generally not helpful or useful for normal operation. This mode is automatically reset to “Disable” if the instrument power is removed.

DIAGNOSTICS. Select this menu item and press the ENTER button to access the DIAGNOSTICS submenu, which you can use to view various instrument diagnostics. (See DIAGNOSTICS submenu.)
To access this menu, select NETWORK CONFIG in the SYSTEM CONFIG menu and press the ENTER button. Use this menu to configure the network settings or to view the MAC address of the instrument. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

Figure 22: NETWORK CONFIG submenu

Manually setting a network address. When DHCP service is disabled, use the following procedure to manually enter a network address:

1. Select the address to edit and press the ENTER button to enter the edit mode for that address.

2. Use the left (◄) or right (►) arrow button to move the underscore character.

3. ( _) and use the up (▲) or down (▼) arrow button to edit the address value.

4. After you enter the address value, press the ENTER button to enable the address.
**DHCP.** Select this menu item and press the left (◄) or right (►) arrow button to enable or disable the instrument from receiving IP address settings using the DHCP (Dynamic Host Configuration Protocol) service on your network. Press the ENTER button to implement the selection. If you select Disable in this menu, you will need to manually set the IP address, subnet mask, and gateway address values in the following menu items.

**NOTE.** Under some network environments, the instrument might not be able to get the IP address automatically from a DHCP server. In this case, you will need to manually enter the appropriate network parameter values.

*In some cases, swapping ports on your Ethernet port hub or rebooting the instrument processor may fix the DHCP connection problem. You can reboot the instrument processor by pressing and holding the ENTER and BACK buttons for a few seconds.*

*Refer to your network administrator or to the user documentation supplied with your network server operating system (OS) for detailed information about DHCP server functions.*

**IP ADDRESS.** Select this menu item to view the IP address of the instrument. If DHCP service is enabled, the IP address obtained from the DHCP server is displayed. When DHCP service is disabled, press the ENTER button to edit the address as described in *Manually setting a network address.*

**NOTE.** If you enter blank characters for the IP address, the network function of the instrument becomes invalid.

**SUBNET MASK.** Select this menu item to view the subnet mask address of the instrument. If DHCP service is enabled, the subnet address obtained from the DHCP server is displayed. When DHCP service is disabled, press the ENTER button to edit the address as described in *Manually setting a network address.*

**GATEWAY ADDRESS.** Select this menu item to view the gateway address of the instrument. If DHCP service is enabled, the gateway address obtained from the DHCP server is displayed. When DHCP service is disabled, press the ENTER button to edit the address as described in *Manually setting a network address.*

**MAC ADDRESS.** Select this menu item to view the unique MAC address of the instrument. If you order an upgrade software option after you purchase the instrument, such as Option LTC, you will need to provide the MAC address of the instrument when you order the upgrade.
To access this menu, select SNMP CONFIG in the SYSTEM CONFIG menu and press the ENTER button. Use this menu to configure the SNMP (Simple Network Management Protocol) remote control of the instrument. You can configure up to four SNMP trap addresses, configure the public and private community strings, and configure which events will trigger an SNMP trap to be sent from the instrument. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

Figure 23: SNMP CONFIG submenu
**TRAP EVENTS.** Select this menu item and press the ENTER button to access the TRAP EVENTS submenu, which you can use to select which events will trigger a trap to be sent from the instrument. *(See EVENT submenus.)* *(See Fault and event descriptions.)*

**PUBLIC COMMUNITY.** Select this menu item to view the Public Community string, which is effectively a password and is required before SNMP commands can read values from the instrument. The default string value is “public”. Press the ENTER button to edit the string. Use the left (◄) or right (►) arrow button to select one of the available 16 characters, and then use the up (▲) or down (▼) arrow button to edit the selected character. Press the ENTER button to confirm the string selection.

**PRIVATE COMMUNITY.** Select this menu item to view the Private Community string, which is effectively a password and is required before SNMP commands can read or write changes into the instrument. The default string value is “private”. Press the ENTER button to edit the string. Use the left (◄) or right (►) arrow button to select one of the available 16 characters, and then use the up (▲) or down (▼) arrow button to edit the selected character. Press the ENTER button to confirm the string selection.

**TRAP ADDRESS <1–4>.** Select one of the four trap address menu items to view the SNMP trap address. You can configure up to four IP addresses to which SNMP traps will be sent when error conditions are detected. Use the TRAP EVENTS submenu to select which events will trigger a trap to be sent from the instrument. *(See EVENT submenus.)*

**NOTE.** The default value for the SNMP trap addresses is all zeroes, which disables the trap outputs.

To edit a trap address, use the up (▲) or down (▼) arrow button to selected the desired trap address (1–4), and then press the ENTER button. Use the left (◄) or right (►) arrow button to select one of the address digits, and then use the up (▲) or down (▼) arrow button to edit the selected address digit. Press the ENTER button to implement the trap address selection.
EMAIL REPORTING submenu

To access this menu, select EMAIL REPORTING in the SYSTEM CONFIG menu and press the ENTER button. Use this menu to configure the e-mail login name, password, to/from addresses, and to configure which events will trigger an e-mail to be sent from the instrument. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

Figure 24: EMAIL REPORTING submenu
NOTE. The e-mail client used by the ECO8000 Series does not support the TLS (Transport Layer Security) protocol. This protocol is used by most ISPs and free e-mail services such as Google Gmail, Yahoo! Mail, etc.

Some e-mail servers do not require a login name and password. Before you configure the e-mail reporting parameters, it is recommended that you contact your local network administrator to determine the e-mail server address and to determine whether an e-mail login name and password are required.

EMAIL SERVER ADDR. Select this menu item to view the IP address of the e-mail server. Press the ENTER button to edit the address. Use the left (◄) or right (►) arrow button to select one of the address digits, and then use the up (▲) or down (▼) arrow button to edit the selected address digit. Press the ENTER button to implement the new e-mail server address.

NOTE. The default value for the e-mail server address is all zeroes, which disables the e-mail output.

EMAIL LOGIN NAME. Select this menu item to view the login name used to access the e-mail server. Press the ENTER button to edit the login name. Use the left (◄) or right (►) arrow button to select one of the name digits, and then use the up (▲) or down (▼) arrow button to edit the selected name digit. Press the ENTER button to implement the new e-mail login name.

EMAIL PASSWORD. Select this menu item to edit the password used to access the e-mail server. The characters of the password are represented by "*" characters. The default password is "welcome".

Press the ENTER button to edit the login password. Use the left (◄) or right (►) arrow button to select one of the password digits, and then use the up (▲) or down (▼) arrow button to edit the selected password digit. The password character appears briefly as you press the up (▲) or down (▼) arrow button before it is replaced by the "*" character.

The password can be up to 18 characters long. After you start entering the password, you cannot use the left (◄) arrow button to backspace to a previous character. If you make an error while entering the password, press the BACK button to exit the edit mode, and then reenter the password edit mode. Press the ENTER button to implement the new e-mail login password.

EMAIL ADDRESS FROM. Select this menu item to view the e-mail address that the e-mail server will use to send the e-mail. Press the ENTER button to edit the address. Use the left (◄) or right (►) arrow button to select one of the address digits, and then use the up (▲) or down (▼) arrow button to edit the selected address digit. You can enter an e-mail address up to 40 characters long. Press the ENTER button to implement the new e-mail address.
EMAIL ADDRESS TO. Select this menu item to view the e-mail address that the e-mail server will use to send the e-mail. Press the ENTER button to edit the address. Use the left (◄) or right (►) arrow button to select one of the address digits, and then use the up (▲) or down (▼) arrow button to edit the selected address digit. You can enter an e-mail address up to 40 characters long. Press the ENTER button to implement the new e-mail address.

SEND EMAIL. Select this menu item and press the ENTER button to send a test e-mail. This function allows you to test the e-mail configuration without first needing an instrument fault to occur.

EMAIL EVENTS. Select this menu item and press the ENTER button to access the EMAIL EVENTS submenu, which you can use to select which events will trigger an e-mail to be sent from the instrument. (See EVENT submenus.) (See Fault and event descriptions.)
INTERNAL CLOCK submenu

To access this menu, select INTERNAL CLOCK in the SYSTEM CONFIG menu and press the ENTER button. Use this menu to view or set the local time of the instrument and to configure the Daylight Savings Time (DST) schedule. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

Figure 25: INTERNAL CLOCK submenu

LOCAL TIME. Select this menu item to view the internal time and date of the instrument.

SET LOCAL TIME. Select this menu item and press the ENTER button to access the SET LOCAL TIME submenu, which you can use to set the internal time and date of the instrument and to set the local time zone offset. (See SET LOCAL TIME submenu.)

DST SCHEDULE. Select this menu item and press the ENTER button to access the DST SCHEDULE submenu, which you can use to enable or disable the Daylight Savings Time function, set the DST offset, and to set the start date and time and the end date and time of the DST function. (See DST SCHEDULE submenu.)
SET LOCAL TIME submenu

To access this menu, select SET LOCAL TIME in the INTERNAL CLOCK menu and press the ENTER button. Use this menu to set the local time and date of the instrument and to configure the local time zone offset. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

Figure 26: SET LOCAL TIME submenu

NOTE. The DST offset and the Timezone offset settings must be set prior to setting the local time and date. This order of operation is necessary to correctly establish the internal UTC and local time.

The instrument time is set correctly when the instrument is shipped from the factory. After you configure the DST and Timezone offset settings for your location, the local time should be very close to correct.

SET LOCAL TIME. Select this menu item to view and edit the internal time of the instrument. Press the ENTER button to edit the local time. Use the left (◄) or right (►) arrow button to select one of the time digits, and then use the up (▲) or down (▼) arrow button to edit the selected time digit. Press the ENTER button to implement the new local time.

SET LOCAL DATE. Select this menu item to view and edit the internal date of the instrument. Press the ENTER button to edit the local date. Use the left (◄) or right (►) arrow button to select one of the date digits, and then use the up (▲) or down (▼) arrow button to edit the selected date digit. Press the ENTER button to implement the new local date.
**TIMEZONE OFFSET.** Select this menu item to view and edit the internal time zone offset of the instrument. Press the ENTER button to edit the time zone offset. Use the left (◄) or right (►) arrow button to select one of the offset digits, and then use the up (▲) or down (▼) arrow button to edit the selected offset digit. Press the ENTER button to implement the new local time zone offset.

**NOTE.** The time zone offset must be set to maintain the correct relationship between UTC and local time.

**DST SCHEDULE submenu**

To access this menu, select DST SCHEDULE in the INTERNAL CLOCK menu and press the ENTER button. Use this menu to enable or disable the Daylight Savings Time function, set the DST offset, and to set the start date and time as well as the end date and time of the DST function. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

![Diagram of DST SCHEDULE menu]

Figure 27: DST SCHEDULE submenu
DST ENABLE. Select this menu item and press the left (◄) or right (►) arrow button to enable or disable the DST (Daylight Savings Time) function in the instrument. Press the ENTER button to implement the selection.

DST OFFSET. Select this menu item to view the DST (Daylight Savings Time) offset setting. Press the ENTER button to edit the DST offset that will be applied when the DST START event occurs at the user-scheduled time. Use the left (◄) or right (►) arrow button to select one of the time digits, and then use the up (▲) or down (▼) arrow button to edit the selected time digit. Press the ENTER button to implement the offset setting.

**NOTE.** When the DST START event occurs, the scheduled DST offset will be added to the time zone offset.

DST START DATE. Select this menu item to view the DST (Daylight Savings Time) start date. Press the ENTER button to edit the DST start date. The date takes the following form: Week-Day-Month (for example, Second Sunday in March). Use the left (◄) or right (►) arrow button to select one of the date parameters, and then use the up (▲) or down (▼) arrow button to edit the selected date parameter. Press the ENTER button to implement the date setting.

DST START TIME. Select this menu item to view the DST (Daylight Savings Time) start time. Press the ENTER button to edit the DST start time. The time takes the following form: HH:MM:SS. Use the left (◄) or right (►) arrow button to select one of the time digits, and then use the up (▲) or down (▼) arrow button to edit the selected time digit. Press the ENTER button to implement the time setting.

DST END DATE. Select this menu item to view the DST (Daylight Savings Time) end date. Press the ENTER button to edit the DST end date. The date takes the following form: Week-Day-Month. Use the left (◄) or right (►) arrow button to select one of the date parameters, and then use the up (▲) or down (▼) arrow button to edit the selected date parameter. Press the ENTER button to implement the date setting.

DST END TIME. Select this menu item to view the DST (Daylight Savings Time) end time. Press the ENTER button to edit the DST end time. The time takes the following form: HH:MM:SS. Use the left (◄) or right (►) arrow button to select one of the time digits, and then use the up (▲) or down (▼) arrow button to edit the selected time digit. Press the ENTER button to implement the time setting.
**EVENT submenus**

The ECO8000 Series provides four external methods to notify you when fault events occur. Each notification method has its own submenu where you can enable or disable a notification for each type of reportable event. *(See Table 17.)*

**NOTE.** *The Event Log records all of the fault events and is not affected by the settings in the event notification menus.*

The Event reporting methods and menu access points table has the available notification methods and the menu access points where you enable or disable event notifications.

### Table 20: Event reporting methods and menu access points

<table>
<thead>
<tr>
<th>Event reporting method</th>
<th>Description</th>
<th>Menu access point</th>
</tr>
</thead>
<tbody>
<tr>
<td>SNMP traps</td>
<td>Sends a trap to up to four IP addresses</td>
<td>In the SYSTEM CONFIG menu, select SNMP CONFIG, and then select TRAP EVENTS</td>
</tr>
<tr>
<td>E-mail</td>
<td>Sends an e-mail to one address</td>
<td>In the SYSTEM CONFIG menu, select EMAIL REPORTING, and then select EMAIL EVENTS</td>
</tr>
<tr>
<td>GPI signal</td>
<td>Asserts a low signal on pin 10 of the GPI connector <em>(See GPIO connector signal pinouts.)</em></td>
<td>In the SYSTEM CONFIG menu, select GPI EVENTS</td>
</tr>
<tr>
<td>Instrument beeper</td>
<td>The instrument emits a beep. Some events, such as a primary/backup source switch emit a single beep. Other events, such as a primary fault, emit one beep per second for as long as the event is asserted.</td>
<td>In the SYSTEM CONFIG menu, select BEEPER EVENTS</td>
</tr>
</tbody>
</table>
Press the up (▲) or down (▼) arrow button to select an event type, and then press the left (◄) or right (►) arrow button to enable or disable notification for that event type. Press the ENTER button to implement the selection.

**Figure 28: <type> EVENTS submenu – part 1**
Figure 29: <type> EVENTS submenu – part 2
Figure 30: <type> EVENTS submenu – part 3
OPTIONS ENABLED submenu

To access this menu, select OPTIONS ENABLED in the SYSTEM CONFIG menu and press the ENTER button. Use this menu to view which software options are installed and to enter a new option key for a software option upgrade. Use the up (▲) and down (▼) arrow buttons to scroll through the menu selections.

Figure 31: OPTIONS ENABLED submenu
**ENABLED.** Displays whether or not a software option is installed. NONE is displayed for no software option is installed. LTC is displayed if Option LTC is installed.

**KEY.** Displays the current option key string in the form XXXXXX-XXXXX-XXXXX-XXXXX-XXXXX-X, with each X representing an alphanumeric character. To edit the option string, perform the following steps:

⚠️ **CAUTION.** Do not edit this string unless you are upgrading to Option LTC. Before you edit the string, verify that you are upgrading the correct instrument. The upgrade documentation will list the MAC address of the instrument to be upgraded. Use the [NETWORK CONFIG submenu](#) to view the MAC address.

**NOTE.** It is easier to use the Web Interface to enter the option key string since you can enter the string directly or cut and paste the string into the entry box. If you cut and paste the string, be careful not to include any extra spaces at the ends of the string.

1. Press the **ENTER** button to enter the option key edit mode. The underscore character (_) appears under the first character of the option key.

2. Use the up (▲) or down (▼) arrow button to select the first character of the option key.

3. Use the left (◄) or right (►) arrow button to move the underscore character to the next character in the option key.

4. Enter all of the option key characters, and then press **ENTER** button to confirm the selection.

5. Press the **BACK** button to exit the OPTIONS submenu.
DIAGNOSTICS submenu

To access this menu, select DIAGNOSTICS in the SYSTEM CONFIG menu and press the ENTER button. Use this menu to view various instrument diagnostics. This menu provides information on all of the conditions that drive the Event Log.

Press the up (▲) or down (▼) arrow button to select a diagnostic type, and then press the left (◄) or right (►) arrow button to view additional diagnostics readouts for the selected diagnostic type.

Figure 32: DIAGNOSTICS submenu – part 1
Figure 33: DIAGNOSTICS submenu – part 2
TEMPERATURE. Displays the temperature of various internal components. OK is displayed as the status when a temperature is within the operating range; WARN is displayed when a temperature is out of range. Press the left (◄) or right (►) arrow button to view additional temperature readouts.

CH<n> PRI VS THRES. Displays the signal level for the selected primary channel versus the configured threshold level. Press the left (◄) or right (►) arrow button to view the threshold readout for each installed channel. When the readout is around +3.0 dB (+4.0 dB for LTC channels), then the signal level is correct. A readout in the range of –13.9 dB indicates a missing signal (the level value depends on the selected threshold level).

NOTE. If the HREF/Relay board outputs are not terminated, it will change the level readings on the selected channel (primary or backup). The unselected primary or backup channel is terminated in the ECO8000 Series, but the selected primary or backup channel drives through to the output. Be sure to connect the channel output to the actual load during setup to insure proper configuration.

Readout levels above +3.0 dB may be normal depending on the signal type. Black signals levels should be around +3.0 dB. However, color bar signals will have a higher level. Signals with a higher threshold level will switch slower.

CH<n> BACK VS THRES. Displays the signal level for the selected backup channel versus the configured threshold level. Press the left (◄) or right (►) arrow button to view the threshold readout for each installed channel. When the readout is around +3.0 dB (+4.0 dB for LTC channels), then the signal level is correct. A readout in the range of –13.9 dB indicates a missing signal (the level value depends on the selected threshold level).

MAIN BOARD. Displays the Main board voltages. OK is displayed as the status when a voltage is within the operating range; WARN is displayed when a voltage is out of range. Press the left (◄) or right (►) arrow button to view additional voltage readouts.

MODULE <1–4>. Displays the voltages for the selected module (1 to 4). OK is displayed as the status when a voltage is within the operating range; WARN is displayed when a voltage is out of range. If a module is not installed, No module present is displayed. Press the left (◄) or right (►) arrow button to view additional voltage readouts.

NOTE. Some of the voltage readouts are from the power supplies; these readout have the OK and WARN limits. Other voltage readouts are from the peak detectors on the input signal or the internal thresholds. These other voltage readouts vary depending on the applied signals and the instrument settings; they are only for troubleshooting and service activities.
Depending on the configuration of your instrument, only some of the modules may be installed. The relationship between the module number and the channel numbers of an instrument are in Table 21:

**Table 21: Relationship between module and channel numbers**

**FAN STATUS.** Displays the fan status for the selected Power Supply module. **Fan running** is displayed when the fan is within the operating range. **Fan stopped** is displayed when there is a problem. If Option DPW is installed, press the left (◄) or right (►) arrow button to view the status of the other fan.

**PS<1–2> HOURS.** Displays information about the operating hours and hardware for the selected Power Supply module. Press the left (◄) or right (►) arrow button to view additional information about the selected power supply. This information is displayed:

- **Active hours:** The number of hours the supply has been the preferred (active) supply.
- **Standby hours:** The number of hours the supply has been the backup supply.
- **TW (Temperature Weighted) hours:** The calculated number of temperature weighted hours. *(See Temperature weighted hours (TWH).*
- **+12 V output:** The current level of the +12 V supply. **OK** is displayed as the status when the voltage is within the operating range; **WARN** is displayed when the voltage is out of range.
- **Part Number:** The Telestream part number of the power supply inside the Power Supply module.
- **MFG date:** The date the Power Supply module was manufactured.

**RTC BATTERY LEVEL.** Displays the status of the RTC (Real Time Controller) battery power level. The following status messages may appear:
- **More than 40% (OK)** indicates the battery power is good.
- **20% to 40% (WARN)** indicates the battery power is getting low and should be replaced soon.
- **Less than 20% (LOW)** indicates that the battery should be replaced immediately.

**FP LED TEST.** Press ENTER to run a test of the front panel LED indicators. Each LED will be illuminated in the possible colors to verify they are fully functional.

**PS<1–2> LOAD TEST.** Displays the status of the most recent load test of the backup power supply. The instrument automatically runs a load test on the backup supply every 24 hours when Option DPW is installed. **Load test not run** is displayed when only one supply is installed. When the test is run, the top line of the display lists whether the test passed or not and the second line lists the date and time of the test.
Remote control

This section describes how to use the ECO8000 Series Web Interface and how to use SNMP traps for remote control.

How to use the Web Interface

You can remotely control the ECO8000 Series using the Web Interface. When the Web Interface is enabled in the SYSTEM CONFIG menu, you can use a Web browser to remotely access the instrument. When you enter the IP address of the instrument in a supported web browser, the ECO8000 Web Interface opens as shown in the following figure. Click the various tabs to access the instrument settings and controls as you would using the front panel buttons. (See Figure 34.)

**NOTE.** The Web Interface must be enabled from the SYSTEM CONFIG menu on the instrument front-panel before it can be accessed from a Web browser. (See SYSTEM CONFIG menu.)

All of the settings and functions that can configured using the front panel are available in the Web Interface except for the following:

- Configuring the SNMP settings
- Configuring the network settings
- Configuring the Web Interface level of control setting
- Performing a firmware upgrade

**NOTE.** Just like making setting changes using the instrument front panel, making setting changes using the Web Interface which affect the basic operation of the instrument are only possible when the instrument is in MANUAL mode. When the instrument is in AUTO mode, the Web Interface is selectively locked out and is therefore safe to use for status monitoring.
Operational considerations

When you operate the Web Interface, be aware of the following operational considerations:

It is recommended that a maximum of four simultaneous users be connected to the instrument using the Web Interface. If more users are connected, it may result in lower performance and inconsistent behavior.

Some front panel operations may interrupt or reduce the performance of the Web Interface. For example, the Web server may experience temporary delays when many buttons are being pressed on the front panel.

Levels of control. Use the SYSTEM CONFIG menu to configure the level of instrument control that is available from the Web Interface. The following levels of control are available:

- **Safe control**: Most settings can be changed. Only the Channel Control system (AUTO/MANUAL mode, PRIMARY/BACKUP source, and FAULT RESET) is excluded from the Web interface.
- **Extended control**: All settings can be changed.
- **Read only**: Settings can be viewed but not changed.
- **Disabled**: No instrument access allowed by a web browser.

Supported Web browsers. For best results, use Google Chrome, Mozilla Firefox, Safari, or Internet Explorer 9.0 or later when you connect to the ECO8000 Series Web Interface.

**NOTE.** *The Web Interface requires Javascript to run.*

Ease of use. Most instrument controls and views are easier to access and configure using the Web Interface. Examples of where this is especially true are:

- Viewing instrument status
- Viewing the Event Log
- Viewing diagnostic results
- Configuring event reporting
- Configuring e-mail reporting
- Configuring channel settings such as threshold levels, labels, etc.
Elements of the Web Interface

Figure 34 highlights elements of the Web user interface window. Some display elements are dependent on certain options being installed in the instrument.

**NOTE.** A red exclamation mark next to a menu item indicates that an alert exists. Click the item to view the alert details.

![Figure 34: Example ECO8000 Web Interface window](image)

<table>
<thead>
<tr>
<th>Item number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Menu tabs: Click a tab to access one of these menus:</td>
</tr>
<tr>
<td></td>
<td><strong>Status menu</strong>: Use this menu to view active instrument faults and the Event Log contents. You cannot make changes to instrument settings from the Status menu. For more information, see the <strong>STATUS menu</strong> section.</td>
</tr>
<tr>
<td></td>
<td><strong>Control menu</strong>: Access the control buttons that change the operating mode of the instrument. This menu is only visible if Extended Control is the current access level. For more information, see the <strong>Control buttons</strong> section.</td>
</tr>
<tr>
<td></td>
<td><strong>Channel menu</strong>: View or change the settings for each of the BNC channels. For more information, see the <strong>CHANNEL menu</strong> section.</td>
</tr>
<tr>
<td></td>
<td><strong>LTC menu (Option LTC only)</strong>: View or change the settings for each of the LTC channels. For more information, see the <strong>CHANNEL menu</strong> section.</td>
</tr>
<tr>
<td></td>
<td><strong>System menu</strong>: View or change general instrument settings and to view diagnostic results. The System settings includes General System Configuration, Installed Options, SNMP and Network Configuration, E-mail Settings, Event Reporting, Internal Clock Configuration, and Diagnostics submenus. Click on the arrow next to the desired setting group to access the submenu for that group. For more information, see the <strong>SYSTEM CONFIG menu</strong> section.</td>
</tr>
<tr>
<td>2</td>
<td>Indicators matching the indicators on the front panel of the instrument:</td>
</tr>
<tr>
<td></td>
<td><strong>AUTO</strong> and <strong>MANUAL</strong>: Indicates the selected changeover mode. The selected mode button is illuminated. The changeover mode must be set to MANUAL using the front-panel button before you can change the instrument configuration settings.</td>
</tr>
<tr>
<td></td>
<td><strong>PRIMARY</strong> and <strong>BACKUP</strong>: Indicates which signal source is being output. This setting applies to all channels. The selected source button is illuminated.</td>
</tr>
<tr>
<td></td>
<td><strong>SPG</strong>: When enabled, indicates the status of the SPG trigger input.</td>
</tr>
<tr>
<td></td>
<td><strong>LTC</strong>: When Option LTC is installed, indicates the status of all LTC channels that are enabled. If any enabled LTC channel had a fault, then this LED will be red.</td>
</tr>
<tr>
<td></td>
<td><strong>1–9 (ECO8000) and 1–20 (ECO8020)</strong>: Indicates the status of the for each of the possible installed channels. The ECO8000 has up to 9 channels, the ECO8020 has up to 20 channels. Inactive (disabled) channels are colored gray.</td>
</tr>
<tr>
<td></td>
<td><strong>AC1/DC1</strong> and <strong>AC2/DC2</strong>: Indicates the status of the AC and DC supplies on the installed Power Supply module(s). For information about the possible states for each indicator, see the <strong>Controls, connectors, and LED indicators</strong> section.</td>
</tr>
<tr>
<td>3</td>
<td>Click Refresh to update the web user interface.</td>
</tr>
<tr>
<td>4</td>
<td><strong>Locked / Unlocked</strong>: Indicates if the web Interface controls are locked or unlocked. Click to change the setting. For the Read Only access level, the web user interface cannot be unlocked.</td>
</tr>
</tbody>
</table>

The Web Interface is locked when a new browser window is opened, to prevent accidental changes to the instrument configuration. If certain web page controls are disabled after the Web Interface is unlocked, the instrument is currently operating in AUTO mode. Use the MANUAL button on the front-panel or on the Control menu (Extended Control access level only) to switch modes and enable making changes to all instrument settings.
How to use SNMP

When the ECO8000 Series is connected to an Ethernet network, you can configure the instrument to send SNMP traps to an NMS (Network Management Station) when certain events are detected. If you intend to use SNMP commands to control the instrument, you must configure the SNMP parameters.

SNMP configuration

Table 23 shows the SNMP parameters you can view or set using the SNMP CONFIG submenu of the SYSTEM CONFIG menu or the Event Reporting section of the System tab in the Web Interface.

Table 23: SNMP parameters (cont.)

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
</table>
| Trap Destination 1 to 4  | Use this setting to set the IP addresses to which SNMP traps are sent through SNMP. Traps can be sent to up to four addresses when error conditions are detected.  
**NOTE.** A value of all zeroes for the address will disable that trap output. |
| Public Community         | Use this setting to set the Public Community string. This string is effectively a password. Without this string, SNMP commands cannot read values from the instrument.  
**CAUTION.** The Public String is necessary for SNMP access to read values from the instrument. If the public or private community strings are changed from their default values, the Web Interface will not operate. |
| Private Community        | Use this setting to set the Private Community string. This string is effectively a password. Without this string, SNMP commands cannot change values in the instrument.  
**CAUTION.** The Public String is necessary for SNMP access to read values from the instrument. If the public or private community strings are changed from their default values, the Web Interface will not operate. |

**Downloading the MIB**

You can download the ECO8000 Series MIB file using the of the System tab on the ECO8000 Series Web Interface.

In the SNMP and Network Configuration section, click **Download ECO MIB File** to download the file to your computer. You can use a text file editor such as Wordpad to view the file contents.
