NEWS RELEASE

Telestream Releases Next Version of Wirecast

Featuring secondary display output, shot templates, placeholders, and support for Apple Silicon hardware

Nevada City, California, April 28th, 2021 — [Telestream]®, a global leader in file-based media workflow orchestration, media streaming and delivery technologies, today announced a latest version of [Wirecast], its award-winning live production and streaming platform for Mac and Windows. The new version adds native support for Apple Silicon (M1) hardware and is packed with new features that add enhanced flexibility and further streamline production workflows.

In Wirecast Pro, users can now send their live outputs to a secondary display. The live program feed can be sent to a big screen or to an independent capture device without the need for specific hardware. When paired with a UVC HDMI capture device, users can capture live output for use in other applications like Zoom or Teams as an alternative to using a virtual camera/mic.

Shot Templates allow users to add a pre-configured shot layout to a document. Cameras and sources can now be assigned to Placeholders to quickly add a source to any number of shots. For example, an operator could assign a guest to a placeholder and once that guest arrives, they are automatically placed in all shots designated for them.

"This latest release of Wirecast raises the bar once again on production workflow for live streaming," said Lynn Elliott, Senior Product Manager for Wirecast. "Our goal was to further simplify setup and live production tasks so that users can produce even more visually engaging content instinctively, giving them more time to concentrate on guests and their audience."

Additional new features and updates:

- **Lock Shot Icon –** users can take a snapshot of a live shot and save it as an icon thumbnail. Example: PTZ cameras with multiple shots configured can display customized snapshots for each angle for quick identification during production

- **PTZ control for Sony X-Series IP cameras –** adds direct support for Sony X-series cameras from within the Wirecast PTZ controller

- **Support for LinkedIn Live Auto-Captions –** When streaming to LinkedIn Live, users can now enable Automatically Generated Captions in a broadcast, which will enable viewers to see captions in their player

- **Input Connection selector for Blackmagic devices –** Adds an option to choose video/audio input connections (HDMI/SDI) for Blackmagic source devices directly from Wirecast

- **Clock enhancements –** several updates to the clock overlay including:

  - Option to automatically start the countdown clock when it gets pushed live

  - Ability to display times in minutes greater than 60 minutes for sports and other applications

  - Option to display day-of-the-week only

  - Option to countdown to a specific date and time, for longer broadcasts and countdowns.

- **And much more!**

Wirecast 14.2 is available now and is a free update to all users with a Wirecast Access plan.

About Telestream

For over 20 years, Telestream® has been at the forefront of innovation in the digital video industry. The company develops products for media processing and workflow orchestration; live capture, streaming, production, video quality assurance, archive and content management; and video and audio test solutions that make it possible to reliably get video content to any audience regardless of how it is created, distributed or viewed. Telestream solutions are available on premises or in the cloud as well as in hybrid combinations. Telestream is privately held with corporate headquarters located in Nevada City, California and Westwood, Massachusetts.
