

FlashNet to DIVA

Product Sheet – DIVA upgrades for FlashNet customers

Continuing support of FlashNet

Feature development for FlashNet has ended, but Telestream will continue to provide support and critical bug fixes through March 31, 2025.

Sales of expansion licenses for FlashNet will be available through December 31, 2022

Upgrade deal details

FlashNet customers can upgrade to DIVA while keeping their yearly payments at the same price as their existing support fees.

While the FlashNet licenses will be transferred over at no cost, a modest one-time surcharge will be applied for the professional services and database license needed for the DIVA upgrade.

The new DIVA system will be licensed via subscription, but any content written to storage will continue to be accessible even if that subscription were to lapse.

Painless upgrade process

The upgrade is designed to use the FlashNet-written archives on their existing media, so that customers can avoid a time-consuming media migration.

DIVA is the world's leading content management solution. DIVA has several benefits over your existing FlashNet solution.

- Vantage integration – DIVA can initiate a Vantage workflow as part of a storage policy, and Vantage has actions to archive and restore directly to and from DIVA.
- Checksums – DIVA supports checksums to verify integrity across all file movement. FlashNet only supports verification by completely reading the files out of storage, which is time-consuming, ties up system resources, and can incur additional egress costs in Cloud environments.
- Multi-system connectivity – DIVA provides the ability to connect separate DIVA systems together through DIVA Connect, giving users and third-party systems access to content across different locations and departments. DIVA Connect also supports replication of content between systems for business continuity.
- More affordable expansion – The DIVA Core license includes (at no charge) features that required the purchase of additional licenses in FlashNet. These features include Storage Policy Management, API connections, additional connections to connect to storage repositories and to additional LTO / ODA drives.

Frequently Asked Questions

What is the reason for the decision to end FlashNet production?

FlashNet has been a very successful product, but its core technology is aging. DIVA provides a modern architecture, unmatched stability, and an expanded feature set, so customers can feel comfortable that their content management solution will address their current and future requirements.

Does DIVA integrate with my storage / MAM / PAM / Automation system?

An extensive list of partners have integrated with DIVA, including almost all of the systems that have FlashNet integration. In the rare situation where a third-party device does not have an integration to DIVA, it may be possible to use our API converter to enable the device to send FlashNet API commands to DIVA.

Can I expand my system or add new options as part of my DIVA upgrade?

Any additional software licenses for DIVA / Kumulate will be purchasable at a limited-time discount of 30%. To receive this discount, orders must be received by December 31, 2022.

How does DIVA use the content written by FlashNet?

No migration is required to move to DIVA. The FlashNet to DIVA upgrade includes a database conversion, which will enable DIVA to read and use the content written by FlashNet.

What is the term of the subscription?

The subscription will be a one-year term, payable in advance. Any FlashNet support costs paid during your existing support term leading up to the upgrade will be prorated.

What happens to my content if I allow my subscription to lapse at some point in the future?

Telestream understands that access to archived data is of critical importance. For this reason, even if a subscription lapses, your content management solution will continue to support read access to all content.

Please contact your Telestream Regional Sales Manager or authorized channel partner to get more information or to schedule your upgrade today!
