

Flip Player 3.3 Release Notes

Flip Player™

Telestream Flip Player is an easy-to-use multi-format video player for the Mac with advanced playback, editing and conversion capabilities. Official Windows Media support can be added by installing the optional [Flip4Mac](#) components.

Upgrades

The "Player Pro" upgrade for \$29 unlocks additional features in Flip Player such as::

- Visual Cropping
- Visual Scaling
- Rotating
- Trimming
- Advanced playback controls
- iPhone Ringtone export
- ProRes 422 export for Final Cut Pro

If you already own a version 2.x Flip4Mac Player Pro license, please proceed to the in-app store to purchase the \$9 USD upgrade for version 3 by selecting Preferences in the Flip Player menu, then click on License > Update License.

You can also create Windows Media files for distribution by upgrading to a Flip4Mac Studio product, available for purchase in the in-app store.

System Requirements

Flip Player runs on Intel, OS X versions 10.7 or later.

Flip Player 3.3

Fixes and Enhancements

- Added support for Mac OS X 10.10+

Flip Player 3.2

New Features

- New in-app stores purchasing.

Fixes and Enhancements

- Fixed a crash when opening Flip Player on OS X 10.9 Mavericks.

Flip Player 3.1

New Features

- Added support for Retina displays.
- Added the ability to export to iTunes from Flip Player, including exporting both audio and video, or exporting just the audio portion of a movie.

Fixes and Enhancements

- Fixed a bug that could cause Flip Player to crash if a movie was closed while being loaded for trimming.

Flip Player 3.0

Changes

- This standalone version of Flip Player is available without the Flip4Mac Windows Media components.

- This standalone version of Flip Player does not require an installer. Instead, you can install it by mounting the disk image, and dragging the Flip Player application to your Applications folder. However, you must agree to the EULA before the disk image will mount.
- This standalone version of Flip Player contains an embedded framework, rather than relying on that framework being installed into /Library/Frameworks or ~/Library/Frameworks. Added support for the application/x-ms-wmp mime type.

Feedback

Bugs, feature requests, and suggestions can be reported at the [Flip Player support site](#) or visit the discussion at the [Telestream User Forum](#).
