

# Stanza Closed Captioning & Subtitling

Product Sheet

## Platform agnostic video captioning & subtitling for workgroups and individuals

### Overview

Stanza provides a low-cost entry point for organizations requiring high-end captioning capabilities by offering a subscription-based payment model. In addition, to help address the challenges of remote working, the client-server deployment model of Stanza allows captioning editors to work from any location from a simple browser-based editing console, regardless of where media files are stored. Stanza utilizes the powerful Telestream GLIM engine built in to play back original high-res files instantly without any need to create proxies or transfer huge media files prior to getting to work.

If you need broadcast-grade captioning and subtitling software and don't want to spend capital acquiring permanent licenses, Stanza is your solution.

### Value to your organization

- Stanza is on-premise software served from a network server that presents a browser-based UI. This allows workgroup access to Stanza on a variety of operating systems (Windows, MacOS, or Linux) without requiring powerful client computers.
- Stanza uses a subscription model, which provides you with a lower cost to get started, without paying a large capital expense for permanent licenses or special equipment.
- Stanza enables proxy-less workflows because it has a player based on the Telestream GLIM playback engine.
- Telestream Cloud offers workflow enhancements, like timed text speech for automatic transcription and captions creation using AI technology.

### Multi-platform

Stanza is platform agnostic – able to run on Windows, MacOS, and Linux and includes a browser-based user interface.

### Proxy-less Workflows

Proxies do not need to be created nor do large media files need to be downloaded or moved across a local area network to work on captioning projects.

### Workflow Automation

Built-in, optional access to Telestream Cloud Timed Text Speech auto-transcription and integration with Vantage Timed Text Flip transcoding and processing.
