Live Schedule Pro

Always-On Scheduling & Orchestration for Live Capture

Overview

Telestream Live Schedule Pro is a browser-based scheduling and orchestration platform for Telestream Live Capture. From a single calendar, operators plan, record and monitor large numbers of ingest channels across multiple Live Capture systems, whether it's a breaking news feed, a recurring multi-camera show or 24/7/365 always-on recording.

Built-in router control, automatic channel failover and role-based security help broadcast, sports and news operations capture every feed reliably, while direct MAM integrations via Vantage put content in editors' hands while it is still recording.

At a Glance

- Schedule many channels across multiple Live Capture systems from one browser-based calendar
- Scheduling Assistant finds open slots and catches conflicts before you book
- SDI and ST 2110 router control with Telestream RouteMaster
- Always-on, segmented recording that never runs out of storage
- Event templates create single or multi-camera events in seconds
- Automatic channel selection and failover, even mid-recording
- Role-based access control with per-channel and per-source permissions
- Direct MAM integrations with Avid, iconik and Mimir via Vantage

> **Ideal for:** broadcast, sports and news ingest operations recording many feeds around the clock, shared facilities with multiple teams, and any Live Capture customer looking to scale and automate ingest.

Key Features & Benefits

Schedule Smarter

Modern Control-Room View

- Day, week and month views with horizontal or vertical timelines
- Live thumbnails, current route and status on every channel
- Schedule, router, authentication and system health at a glance
- Search, filter, and detailed or compact layouts

Event Templates

- Save channels, routes, metadata, duration, recurrence and segmentation once
- Create multi-camera events across many channels in one click
- Leave the start time blank and recording begins immediately
- Favorites, import/export, history and a full audit log

Scheduling Assistant

- Free and busy time for every selected channel on one timeline
- One-click suggested slots that fit the event's duration
- Unavailable channels and overlapping events flagged before you create

Live Monitoring

- Ready, Queued and Recording states on every channel card
- Loss-of-signal and format-mismatch alerts so operators act early
- Live preview with audio meters, routed source and timecode

Never Miss a Recording

Intelligent Channel Management

- Schedule to a pool of equivalent channels; a free one is assigned automatically
- Signal lost or channel offline? The event moves and the route follows
- A failed recording continues on a healthy channel
- Every move logged with timing and reason

Always-On Recording

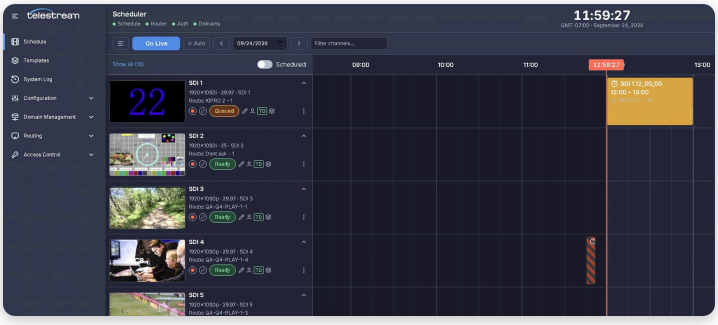

- Segmented events record continuously around the clock
- Live Capture storage management recycles the oldest media, so no recording fails for lack of storage

Comprehensive Router Control

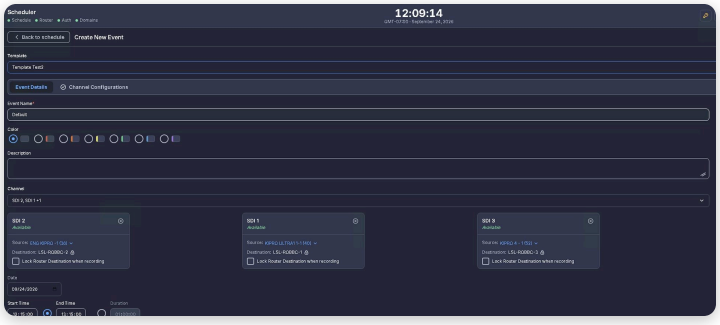

- Telestream RouteMaster drives SDI and ST 2110 routers
- The right source is routed to each channel when the event starts
- Route parking and route locking prevent accidental changes

Role-Based Access Control

- Users, groups and roles managed directly in Live Schedule Pro
- Admin, Read or None access per channel or channel pool
- Router source permissions: each team sees only its own sources
- View-only interface for read-only users
- Built-in password or Keycloak sign-in over secure HTTPS

Day view with live channel thumbnails, routes and status

Live Schedule Pro

Capabilities & Specifications

Event Scheduling

- Single and multi-channel events, manual or scheduled
- Recurring events, segmentation and auto-extend
- Event IDs track which cameras and channels were used
- Reusable templates with favorites, archive, import/export
- Template history and audit log with CSV export
- Configurable Start Now behavior

Intelligent Channel Management (option)

- Channel pools and automatic channel assignment
- Pre-roll failover on loss of signal or offline channel
- Mid-recording failover to a healthy channel
- Full audit trail of every channel move
- Requires Router Control

Router Control (option)

- Built on Telestream RouteMaster
- SDI and ST 2110 routing
- Per-event and per-template source routes, changeable on the fly
- Route parking (default route) with per-channel overrides
- Route locking while recording
- Visible source sets and permissions per team
- Scales in 4-channel packs; tie-line and stacked routers

Supported Routers

AJA, Barnfind, Blackmagic Design, Evertz / Quartz, FOR-A, Grass Valley, Imagine, Kramer, Lawo, Nevion, PESA, Pro-Bel, Ross, Sierra Video, Utah and more

Role-Based Access Control & Security

- Users, groups and roles managed in Live Schedule Pro
- Admin, Read or None access per channel or pool, by user, group or default
- User assignments override group settings for fine-grained control
- Router source permissions: each team sees only its own sources
- Basic password or Keycloak authentication
- Adaptive, view-only interface for read-only users
- Idle timeout, maximum session length, concurrent session limits
- Admin view of active sessions and sign-in history
- HTTPS with customer CA-signed certificates

Direct MAM Integrations via Vantage

- Avid: browse MediaCentral (Interplay) folders, set servers and folder shortcuts per event, update metadata while recording
- iconik: hi-res and proxy delivered during capture; edit growing files in Premiere
- Mimir: record in Mimir's format with growing media on S3
- Event labels and variables pass to Vantage workflows and your MAM
- Telestream GLIM for remote viewing and review

Systems & Platform

- Live Capture appliances: SDI, ST 2110 and IP sources
- Live Capture Software-Only: SRT, TS, RTMP and NDI
- Multiple Live Capture systems, single-node or arrays
- REST API for traffic and automation systems
- Windows Server 2019–2025; Live Capture 4.0 and later
