Getting Started with Episode

Telestream Episode® multiformat encoding software provides the highest quality video transcoding for the entire digital post-production workflow – from camera to delivery – with remarkable speed, powerful controls and cross-platform scalability at an affordable price. The easy-to-use intuitive drag-and-drop graphical user interface and workflow builder simplifies the encoding process.

1 Install

a. Double-click the installer (PC) or double-click the .pkg file (Mac).

b. Follow step-by-step instructions to install. Once you have installed, read the License Agreement and click "Accept" to continue.

c. Double-click to open app. Enter your license number by choosing Episode > Preferences.... (Mac) or Episode > Edit preferences (PC) and selecting the license tab.

d. After entering your serial number, click "Activate" to upgrade your product from demo mode.

2 Encode using a default workflow

a. The quickest way to get started is by using one of the pre-built workflows that can be found in the workflows tab.

b. Choose a category from the drop down list, and drag one of the pre-built workflows to the workflow editor below.

c. The pre-built workflows are predefined with an encoder and the deployment destination is set to "same as source".

d. Add media files from the Episode media browser or drag and drop from the finder/explorer.

e. Next, re-name the workflow and pick a priority (optional), and hit Submit.

f. You will see the new workflow appear in the status window at the bottom, where you can monitor the progress of the job.

g. The encoded file is delivered to the defined destination as your source file, where you can view the encoded result.
