4. DIVA Software Release Definitions

Type	Definition	Scope & Testing
End of Life	This version of software is unsupported and requires to be upgraded before it can be supported.	<ul style="list-style-type: none"> Best effort only. Supported only after Professional Services has applied an upgrade to a supported version
Sunset Support	Sunset support is sustained support on older versions of DIVA software. Support will still attempt to address any issues that do not directly require an upgrade to address.	<ul style="list-style-type: none"> Support will attempt to find and resolve issues on software of this version. Support can apply any currently available patches to this version, however new patches will not be created. If an upgrade is required to fix the issue, it requires a Professional Services engagement Sunset Support status lasts for a year before moving to unsupported
Full Support	Support will assist with any DIVA software related issues. If a fix requires a patch or an upgrade, it will be provided by support as a part of your support contract.	<ul style="list-style-type: none"> Support will supply any DIVA software related bug fixes in the form of existent or newly created patches and upgrades. Support will enter enhancement/feature requests on your behalf for the latest fully supported versions.
Support Rotation Date	This is the date the support status will change. Full Support > Sunset Support > Unsupported	

Three types of software release types are mentioned above:

Type	Definition	Scope & Testing
Major Version	A Major Version will consist of new features and enhancements to existing features.	<ul style="list-style-type: none"> Full Testing, including automatic and manual regression testing of the software. On Major Version releases, customer and partner beta testing will be conducted.
Minor Release	A Minor Version release will be a roll-up of patches since previous Minor Version release and minor enhancements to existing features.	<ul style="list-style-type: none"> Full Testing including automatic and manual regression testing of the software.
Patch	A Patch release resolves a specific customer issue only	<ul style="list-style-type: none"> Testing of resolution for the specific customer issue.
